EVENT PLATFORM · CRM GUIDE

Using the CRM, step by step

The CRM is where the team keeps the people it may invite to TOURISE 2027, and sees where each one stands: in the CRM, added, sent, registered, confirmed. Twelve short lessons, each on the real screen: the 1 pink numbers on the picture match the steps beside it.

Updated 29 October 2026, including Eissa's changes. Screenshots predate this update; use the current labels and instructions below.

PART 1 · CONTACTS, DAY TO DAY

- Where everyone comes from
- 1 Open the CRM and read the dashboard
- 2 Work with the contacts table
- 3 Find contacts: search and filters
- 4 Open a contact
- 5 Add or edit a contact
- 6 Import contacts from Excel
- 7 Change many contacts at once
- 8 Invite contacts
- 9 Follow where each contact is

PART 2 · SPEAKERS, SETTINGS AND ACCESS

- 10 The Speakers tab
- 11 Settings: the lists
- 12 Who can do what
- The fields of a contact
- Rules at a glance
- When something doesn't work
- Appendix: CRM cases at a glance

Names, emails and phone numbers in the screenshots are blurred on purpose. The people shown are sample data. Your menu only shows what your role allows.

What the CRM does

The CRM links invitations and registrations, one CRM ID each; requests enter once accepted. The team used to keep its invitation lists in Excel, where a sheet cannot tell whether a person has already been invited or has registered. The CRM takes the same sheet (the client's template v4.1), keeps every column, and adds what Excel cannot: who each contact is in the system, and one journey per person, read live from the invitation and the registration. Nothing is typed twice.

IN CRM Known, not invited yet. → **REQUESTED** Asked for one. ✕ Rejected. → **ADDED** Invitation created; then **SENT** . → **REGISTERED** Filled in the form. ✕ Not accepted. → **CONFIRMED** Attending. ✕ Declined. Then **CHECKED IN** .

Where it is

Overview → CRM in the left menu, right under the dashboards. It opens on the **Master dashboard**. Three tabs across the top: **Contacts** (everyone the team may invite, speakers included), **Speakers** (the speakers only, with their own columns), and **Settings** (the lists). On Contacts, a switch between **Dashboard** (the numbers) and **Data** (the table); the Speakers tab is its table only.

Two things to know first

Every list value is the system's. A country, a category, an industry or a title must be one of the values the system already has, spelled as the system spells it. Settings shows every value (lesson 11).

You see your own categories. Each admin sees, edits and invites only the contacts in the categories on their account, as on Guests. A Super Admin sees everyone.

Everyone is a contact. A speaker is a contact whose Category is **Speaker**; the Speakers tab shows the same people with their programme columns (lesson 10).

START HERE · HOW PEOPLE GET INTO THE CRM

Where everyone comes from

Each invitation or registration is linked to one CRM contact with one CRM ID. Requests enter only once accepted. Records are linked, never moved: the original invitation, request or guest stays where it is.

1 · Every way in leads to one contact

The CRM	Add contact or Import contacts (lessons 5 and 6).
Invitations	An invitation made in the Invitations section: created, from a file, with Add people, from an accepted request or a dignitary's party.
Invitation Requests	A request enters the CRM only after it is accepted and an invitation is created. Pending and rejected requests stay in Invitation Requests; they may still appear in the history of an existing contact.
Registration	Someone registers on a public form (with or without an invitation), is added by an admin in Guests, or comes in on the Guests import.

CRM → Settings, **In the system**: 1 when everyone was first brought in, how many were added, and the total now. 2 **Check again** (Super Admin) runs the same check by hand.

Automatic. After an update the system brings everyone in by itself, once. From then on each new person is added the moment they arrive, and a nightly check picks up anything missed. Settings shows when it last ran, nightly or by hand, and how many it added and linked. Nobody needs to press a button.

The **Source** column says where a contact first came from: Added in the CRM, From Invitations, From an invitation request, From a registration, Added in Guests, From the Guests import.

2 · One person, one CRM ID

The CRM ID (C-000123) is the one tracking number. Guests and Invitations show it as a link back to the contact (lesson 9). The system knows it is the same person by:

The link	Their invitation, request or registration already belongs to the contact, even if they changed their email or name when registering.
The email	The same email, in any capitalisation, or an **earlier email**: someone who registers through their invitation with a new email keeps the invitation's as "Earlier email (before registering)".
Never the mobile	Two people may share a mobile. Both stay separate, each with a "Same mobile as C-…" warning.
Never the name alone	A matching name with another email is a new contact, with a "Similar name" warning to check. Nothing is merged by itself.

3 · What their status says

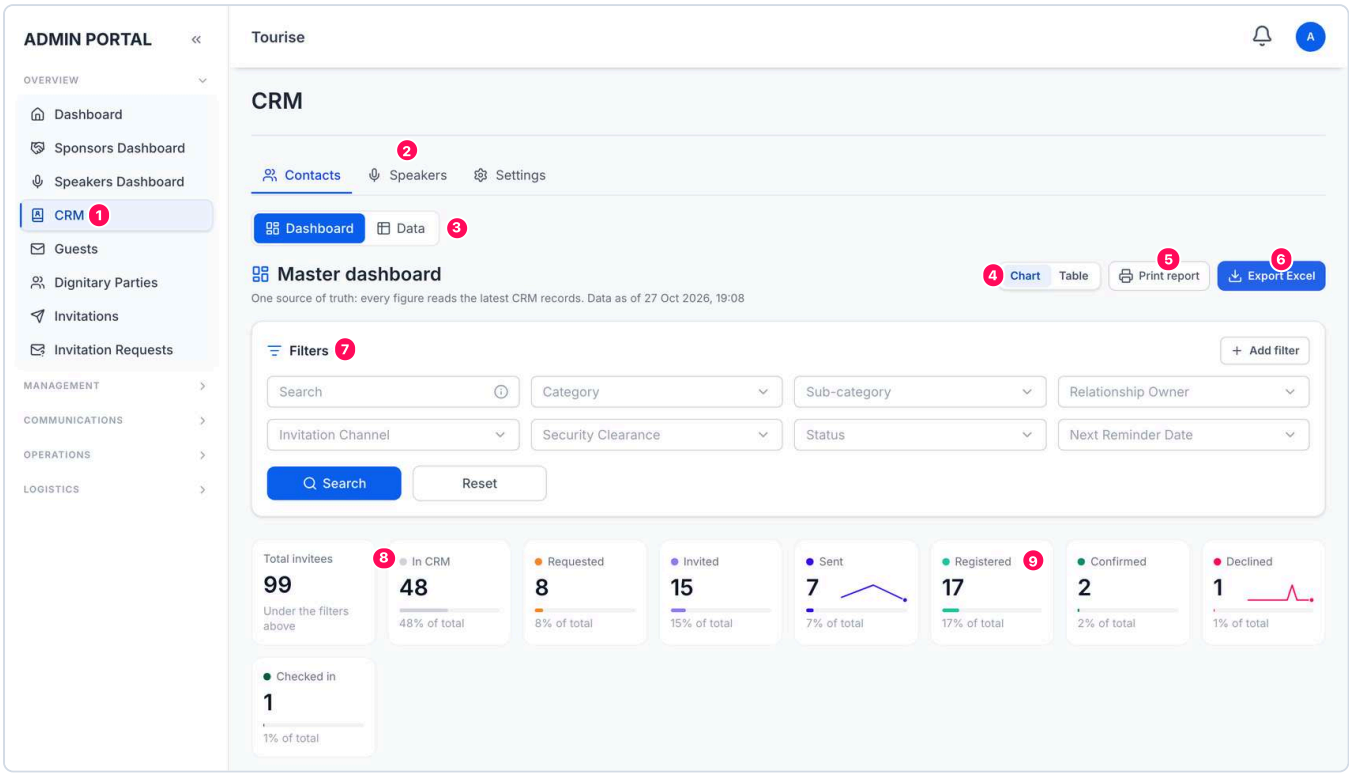

Seven stages and three stops: In CRM, Requested (✕ Rejected), Added, Sent, Registered (✕ Not accepted), Confirmed (✕ Declined), Checked in. Each status also says **where** the person is, as a link, and **how they came in** (lesson 9).

> **EVERY CASE ON ONE PAGE**
>
> The **CRM cases at a glance** sheet (appendix) shows every way in, every status and every case, A to K, with what the CRM shows. When they register, what they typed replaces the CRM's copy and History records it; a blank never wipes a value.

LESSON 1 · OVERVIEW → CRM

1 Open the CRM and read the dashboard

The Master dashboard: one page with every figure of the CRM, read from the latest records under the filters you set. Start with the header and the key numbers.

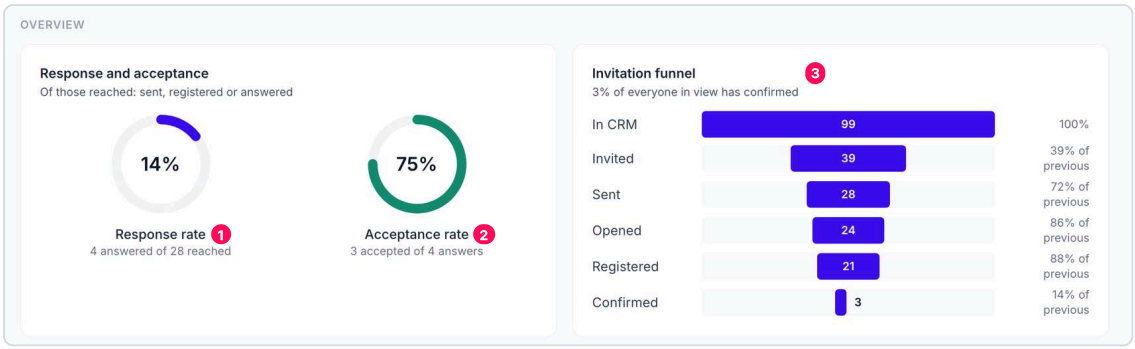

1. Select **CRM** in the **Overview** group, under Dashboard, Sponsors Dashboard and Speakers Dashboard. It opens on this page.
2. The three tabs: **Contacts**, **Speakers**, **Settings**. Only Contacts has a dashboard; Speakers opens on its table.
3. Switch between **Dashboard** and **Data**. The filters travel with you, so the numbers and the rows always agree.
4. **Chart** or **Table**: every card as a chart, or as its numbers with a share and a bar.
5. **Print report** prints the page as a report, stamped with the time the numbers were read (“Data as of”).
6. **Export Excel**: the same figures in a workbook, one sheet per panel, each stamped with the time.
7. **Filters** work exactly as on the table (lesson 3). Select **Search** to apply them, **Reset** to clear.
8. **Total invitees**: everyone under the filters above.
9. One tile per stage, with its count and its share of the total: In CRM, Added, Sent, Registered, Confirmed, Declined, and Requested, Rejected, Not accepted and Checked in when someone is in them. A small line shows the trend where the dates are real: Sent per week, answers per day. **Click a tile** to filter the page to that stage; click it again to lift it.

WHERE THE STATUSES COME FROM

The dashboard reads each person’s status from the real request, invitation, registration and answer (the **Status** column, lesson 9), not from what is typed on the contact. A guest invited outside the system, with a Sent Date typed by hand, is not counted as Sent: only an invitation that really went out is. **Confirmed** needs a Yes and an accepted registration; a Yes while the registration is still Pending counts as Registered.

1 Overview, invitations and responses

Under the key numbers, the page is in sections by theme, each figure shown once, as a donut, bars or a line. The first two say how the invitations are going.

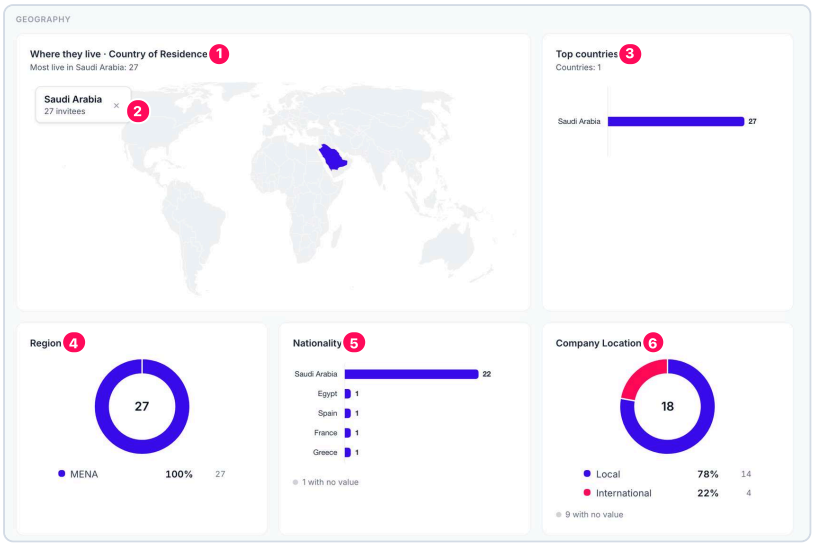

1. **Response rate**: of those reached (sent, registered or answered), how many answered.
2. **Acceptance rate**: of those answers, how many said yes.
3. **Invitation funnel**: In CRM, Added, Sent, Opened, Registered, Confirmed, each with its share of the stage before. A stage counts everyone who reached it or a later one.

1. **Invitation status by tier**: each tier's people split by status; the line under the title names the tier with the highest acceptance.
2. Hover a segment for the exact count.
3. **By invitation channel**: how many invitees each channel carries, as bars.
4. **Over time**, **Per day**: the answers (accepted, declined) of the last 14 days, as lines. An answer set by hand has no date, so it is in the tiles but not here; a line under the chart counts them.
5. **Running total**: the same answers added up day by day.
6. **Added & sent per week**: contacts added and invitations sent each week.

1 Geography, profile and companies

Where the invitees live, who they are, and where they work. Every card counts the people under the filters; “No value” counts those whose field is empty.

1. **Where they live**: a world map of the Country of Residence, darker where more people live. Hover a country for its count.
2. **Click a country**: a card shows its name and count, and the whole page filters to it (here Saudi Arabia). Click the country again, or Reset, to lift the filter.
3. **Top countries**: the same counts as bars beside the map.
4. **Region**, from the Country of Residence, as a donut.
5. **Nationality**: the ten biggest as bars, the rest as Other.
6. **Company Location**: Local or International, as a donut.

Guest profile

Category (the five biggest, as a donut), **Sub-category** and **Title** (bars), **Seniority Level** (columns) and **Gender** (a blue and pink donut). Tier is read on “Invitation status by tier”. A card shows its biggest values and adds the rest up as “Other”; **Table** lists them all. Click a value to filter the page on it.

Companies & industry

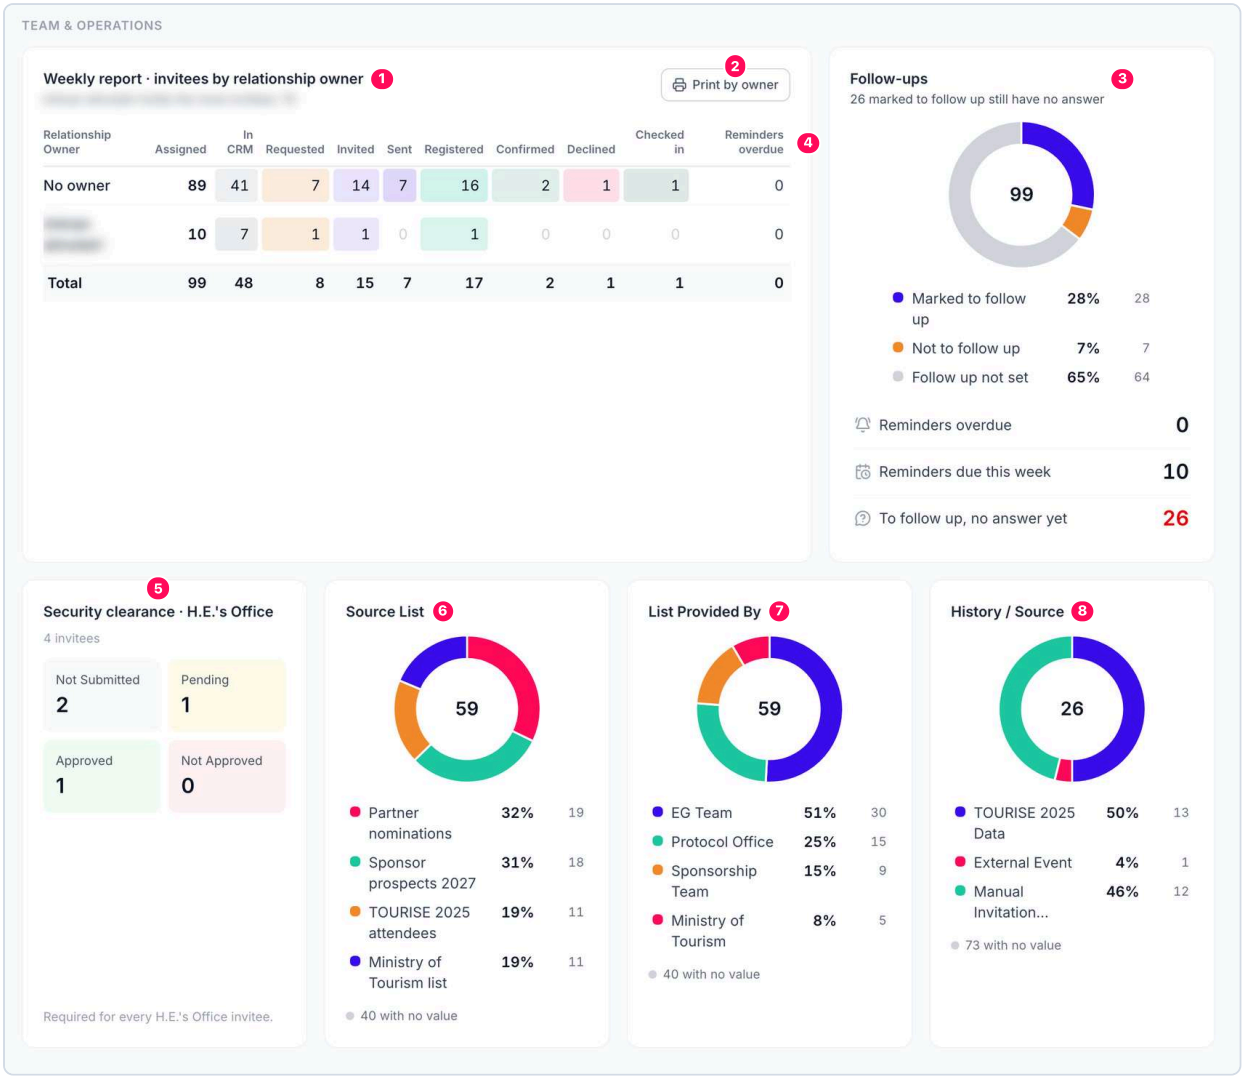

Sector (Public or Private, a donut) and **Industry** (bars), then:

1. **Sub-industry**: the ten biggest as bars.
2. **International Organizations**: one figure for every invitee whose sub-industry is an international or intergovernmental organisation, whatever the industry, and how many organisations they come from.

1 Team and operations

The last section is the team's own: who holds whom, what needs following up, and where the lists came from.

1. **Weekly report**: one row per relationship owner, with how many people they hold in each status. The shading follows each status's share.
2. **Print by owner** prints this table on its own, for the weekly meeting.
3. **Follow-ups**: how many are marked Follow up = Yes, how many still have no answer, and the reminders overdue and due this week.
4. **Reminders overdue** per owner, from Next Reminder Date.
5. **Security clearance** of the H.E.'s Office invitees, who all need one.
6. **Source List**, (7) **List Provided By** and (8) **History / Source**, as donuts: where the people came from.

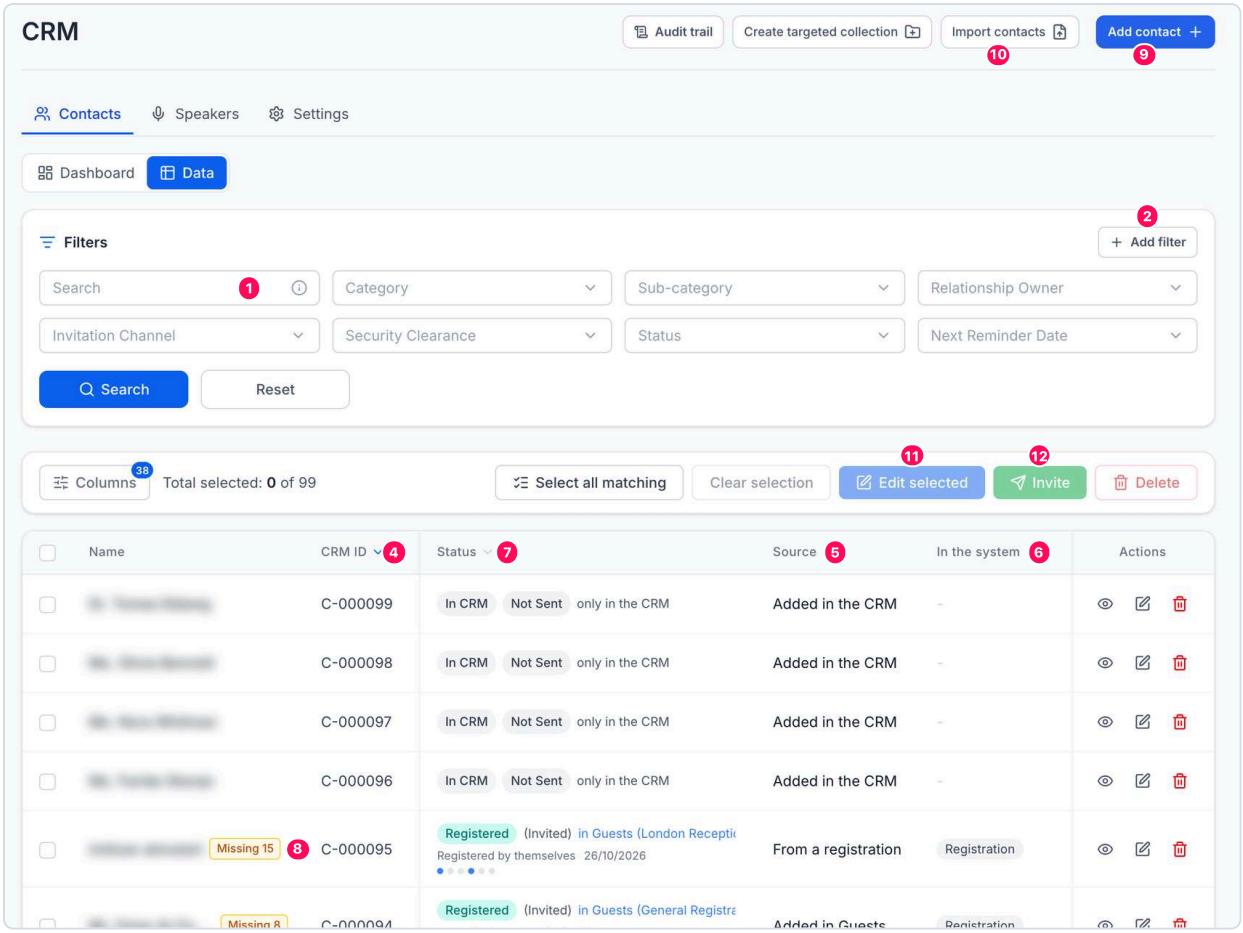

SPEAKERS ON THE DASHBOARD

Speakers are contacts in the Speaker category, so this dashboard counts them with everyone else. Filter **Category = Speaker** to see their numbers alone. There is no separate speakers dashboard any more.

LESSON 2 · CRM → CONTACTS → DATA

2 Work with the contacts table

The table reads like the client's sheet: one column per field, in the sheet's order, with the name pinned on the left.

1. **Search**: name (English or Arabic), email, mobile, company, job title, CRM ID or **Registration ID**.
2. **+ Add filter**: Source, Missing data, Needs follow-up and the rest (lesson 3).
4. **CRM ID**: one per person, C- and six digits. Sortable.
5. **Source**: where the contact first came from.
6. **In the system**: a chip each for their registration, invitations and requests. Click one to open the contact.
7. **Status**: the stage, where they are as a link ("in Guests (VIP)", "only in the CRM"), and how they came in underneath (lesson 9).
8. **Missing N**: a contact the system made (from an invitation, request or registration) lacks N of the fields every contact needs. Fill them in; the **Missing data** filter lists them all.
9. **Add contact** (lesson 5). (10) **Import contacts** (lesson 6).
11. **Edit selected** (lesson 7). (12) **Invite** (lesson 8).

- A contact that needs following up has an amber **bell** beside its name, and a **"N need follow-up"** badge sits above the table (lesson 9, continued). None needed it when this picture was taken.

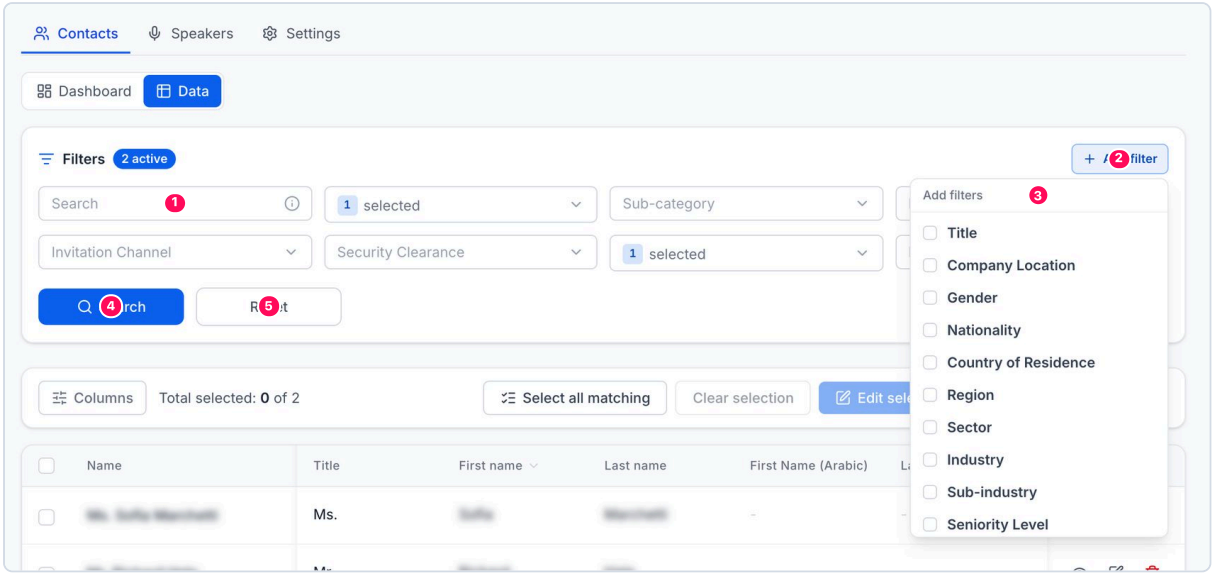

EDIT IN THE CELL

With the Update box, any cell edits in place: hover it, select the pencil, change the value and tick. The rules of the form apply (lesson 5). A field that came from the person's registration is read-only here: it is changed on the guest. The table lists the speakers too, with the common columns only; editing a speaker's cell also needs the speakers' Update box (lesson 12).

LESSON 3 · CRM → CONTACTS → DATA

3 Find contacts: search and filters

Narrow the table to the people you are working on. Filters combine, and they are kept in the page address, so a link to a filtered table can be shared.

1. **Search** looks in the name (English and Arabic), email, mobile, company, job title and CRM ID at once.
2. **+ Add filter**: the filters not shown by default. Tick one and it appears in the row; it stays there for you until you untick it.
3. The eight filters always on screen: Category, Sub-category, Relationship Owner, Invitation Channel, Security Clearance, Status, Next Reminder Date, and the search.
4. **Search** applies what you typed and chose. A blue badge says how many filters are active.
5. **Reset** clears them all.

Every filter, by what it asks

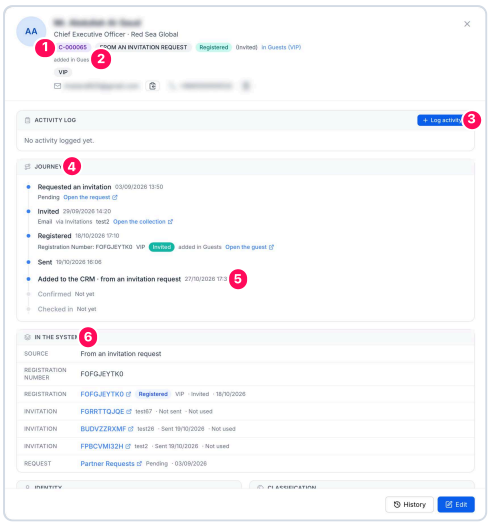

GROUP	FILTERS
Who they are	Category (Speaker finds the speakers) · Sub-category · Title · Gender · Sector · Industry · Sub-industry · Seniority Level · Tier (with the View tier box)
Where they are	Nationality · Country of Residence · Region · Company Location
The team's follow-up	Relationship Owner (the admins, or No value) · Follow up (Yes, No, No value) · Invitation Channel · Security Clearance · Last Contact Date (from, to) · Next Reminder Date (Overdue, This week)
Where they stand	Status (In CRM, Requested, Rejected, Added, Sent, ↳ Not delivered, Registered, Not accepted, Confirmed, Declined, Checked in) · Needs follow-up (reminder overdue, or no follow-up after the invitation) · Missing data · Sent, not opened (3+, 7+, 14+, 30+ days) · Sent, not registered
Where they came from	Source (CRM, Invitations, request, registration, Guests, Guests import) · Source List · List Provided By · History / Source · Import file · Date added (from, to)

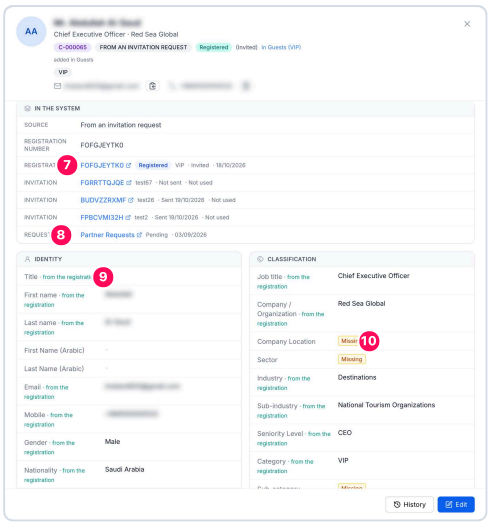

Every list filter also offers **No value**, to find the contacts whose field is still empty. A multi-choice filter takes several values at once.

LESSON 4 · A CONTACT'S NAME IN THE TABLE

4 Open a contact

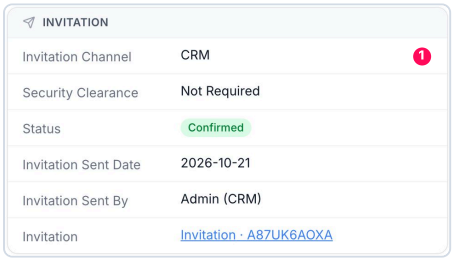

Everything about one person in one window: the journey, every field by group, the files it came from, and its history.

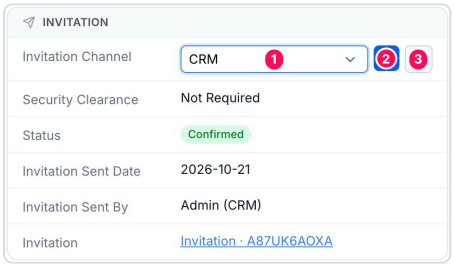

1. The header: the **CRM ID**, the source ("From an invitation request"), and the status with **where they are** as a link: "Registered (Invited) · in Guests (VIP)". A bell shows here when they need following up.
2. Beneath it, **how they came in**: "added in Guests", "via Request", "Registered by themselves"…
3. **Activity Log** first: calls, emails and meetings. **Log activity** adds one.
4. **Journey**, oldest first, each step with its date and a link: Requested an invitation (with the request's status), Added, Registered, Sent…
5. **Added to the CRM · from …**: when and how the contact was made.
6. **In the system**: every place this person appears, each with a link: (7) their **registrations** with the registration numbers, their invitations, and (8) their **requests** and dignitary party. An **Earlier email (before registering)** shows here when they registered with a new one.
9. Fields marked **from the registration** are kept as the guest gave them and are read-only here: change them on the guest.
10. **Missing** marks a required field a system-made contact still lacks.
- **History** (who changed what) and **Edit** are at the bottom. Close with the cross or Escape.

Change one field without leaving the window

Hover a row: a pencil appears beside its value.

Change it, then tick to save or the cross to cancel.

1. Hover the field and select the pencil.
2. Pick or type the new value. A Category also asks for its Sub-category, an Industry for its Sub-industry.
3. Tick to save. The server checks the same rules as the form; a refused value shows its reason under the field.

Invitation Sent Date, Sent By and Follow up (Yes or No) edit here too; Relationship Owner is picked from the system's admins. Read-only: Region and the reference text an old file brought.

LESSON 4, CONTINUED · ACTIVITY LOG

4 Attach files to an activity

Keep the call, email or meeting and its supporting files on the contact.

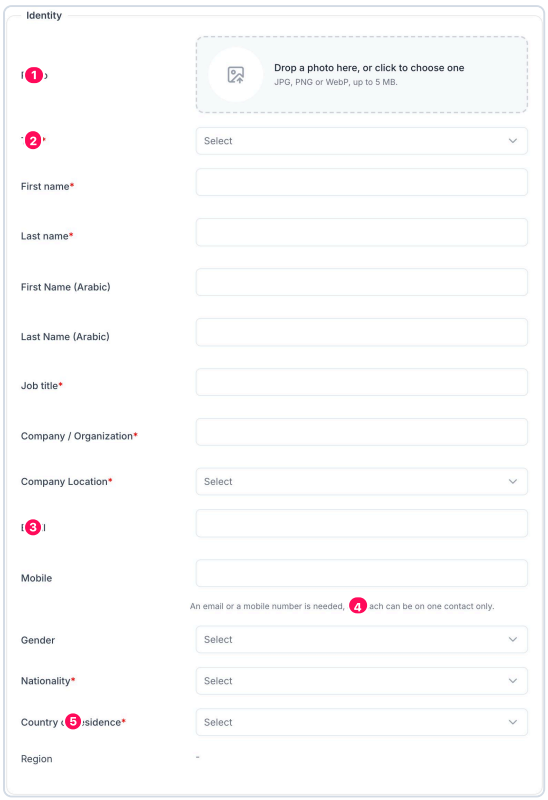

1. Open the contact and choose **Log activity**.
2. Complete the date, activity type, outcome, notes and next reminder as needed.
3. Add files before saving. You can choose several and remove a chosen file before saving.
4. Save the activity. Each attachment appears under the entry as a link; open it there.

Limits	Up to **5 files** per activity, each up to **5 MB**.
Accepted types	PDF, JPG/JPEG, PNG, WebP, XLSX and DOCX.
Private files	Files stay private and open through signed links. Reopen the contact to get a fresh link if one expires.
Delete an activity	Deleting the activity also removes its attachments.

LESSON 5 · ADD CONTACT, OR EDIT

5 Add or edit a contact

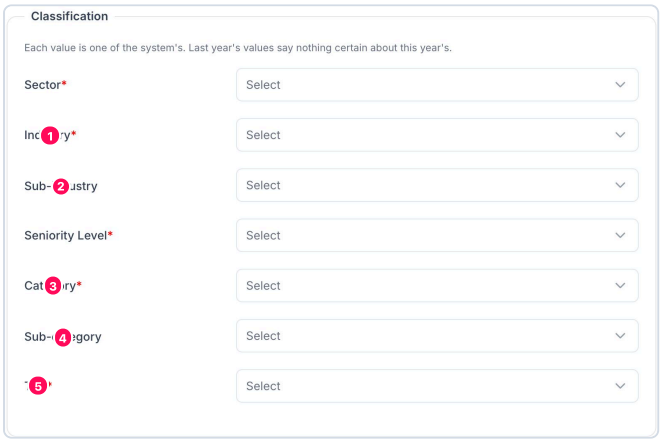

The form follows the latest CRM template. Red stars mark required fields; the current sample download explains required and optional columns before downloading.

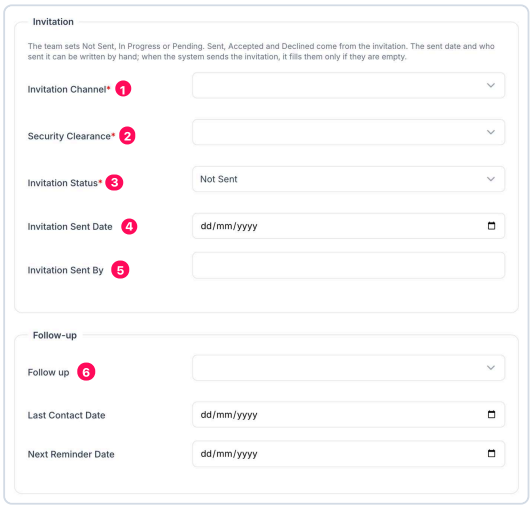

1. A **photo** can be dropped here, or added later on the window.
2. **Title** is one of the system's titles. Dropdowns use the system's lists. List Provided By is a text field; type the provider's name.
3. An **email** is required for a new contact. A second contact with the same email is refused, and the message names the CRM ID that has it. Mobile is optional; two people may share one, with a warning.
4. The hint under the two fields says the same. A mobile is written with + and the country code.
5. **Region** is filled from the Country of Residence; it is never typed.

The other groups

Classification: Sector, Industry and its Sub-industry, Seniority Level, Category and its Sub-category, Tier.
Relationship and source: Source List (File Name), from Settings; List Provided By, typed freely; Relationship Owner, optionally picked from the system's admins.
Invitation: Invitation Channel, Security Clearance, Invitation Status, Invitation Sent Date, Invitation Sent By.
Follow-up: Follow up (Yes or No), Last Contact Date, Next Reminder Date.
History: History / Source and Notes; the rest is shown as the file wrote it.

1 Industry, then 2 a Sub-industry under it. 3 Category, then 4 a Sub-category under it, required when the category has a list. 5 Tier is shown only with the View tier box.

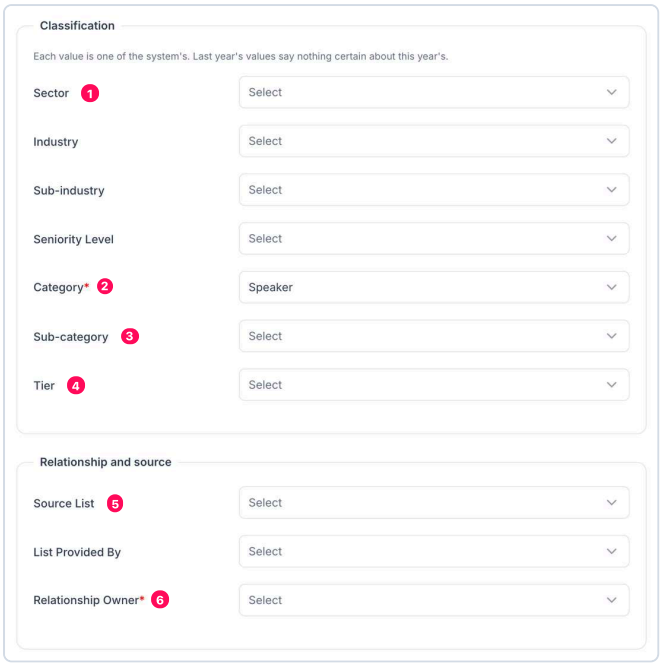

1 Channel and 2 Clearance. 3 The team sets Not Sent, In Progress or Pending only; Sent, Accepted and Declined come from the invitation. 4 Sent Date and 5 Sent By are typed for a guest invited outside the system. 6 Follow up: Yes or No.

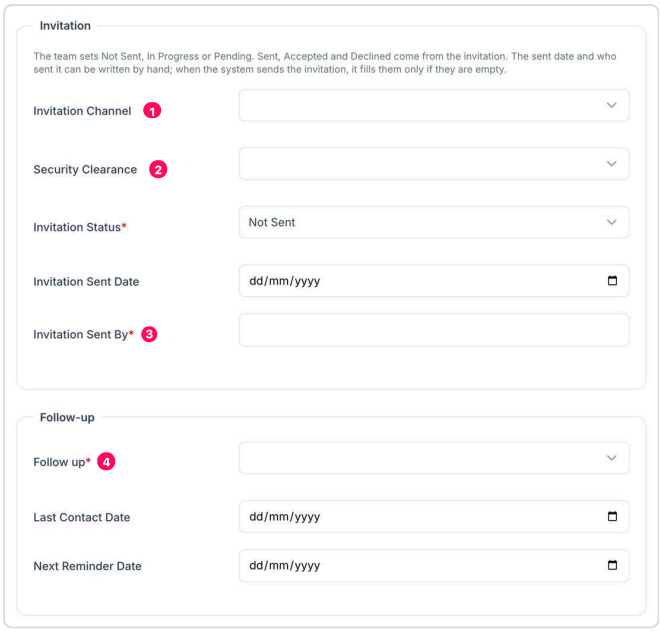

LESSON 5, CONTINUED · CATEGORY = SPEAKER

5 A speaker on the Contacts form

Choose **Speaker** as the Category and the contact becomes a speaker when saved. The form then asks what a speaker needs, and the red stars change with it.

With 2 Category = Speaker, 1 Sector, 3 Sub-category, 4 Tier and 5 Source List lose their star; 6 Relationship Owner keeps it.

1 Channel and 2 Clearance are optional for a speaker; 3 Invitation Sent By and 4 Follow up are required.

Required for a speaker

Category, First and Last Name, Job Title, Company, Email, Gender, Country of Residence, Relationship Owner, Invitation Sent By, Follow up and Notes.

Optional for a speaker

Tier, Sector, Industry, Sub-category, Seniority, Channel, Clearance, Source List, List Provided By and the rest. A speaker has no channel or clearance check when invited.

Changing the Category

To Speaker: the contact becomes a speaker and appears on the Speakers tab. Its speaker-only fields (Day, Pillar, Session, Bio, Keyword…) start empty; fill them there. **Away from Speaker:** the person is a plain contact again and its speaker details are removed. History records what they held.

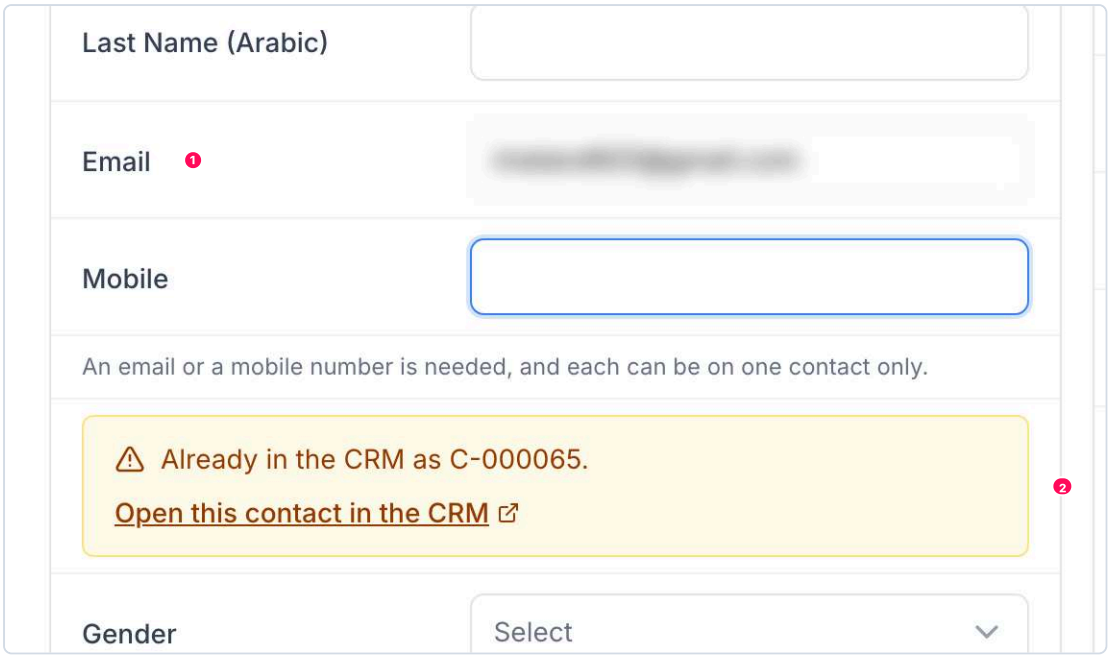

WHAT THE FORM REFUSES

A Category that is not one of your own. H.E.'s Office with clearance Not Required (for a contact). A Sub-category that is not under the Category chosen. A status other than the team's three.

LESSON 5, CONTINUED · ADD CONTACT

5 Already in the system?

Before a contact is saved, the form checks the email against the CRM and the rest of the system, so nobody is added twice.

1. Type the **email**. The form looks for this person as you leave the field.
2. **"Already in the system: registered … invited … requested …"**, each with a link. Saving links the new contact to those records instead of making a second person. **"Already in the CRM as C-…"** means they have a contact: open it instead.

REGISTRATION DATA IS KEPT

When the person has registered, the form says so: on saving, their name, email, phone and the other shared details come from the registration, not from what is typed. The guest's details always win; change them on the guest.

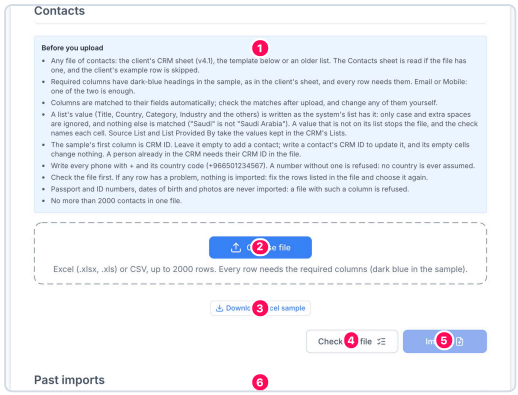

RELATIONSHIP OWNER

Picked from the admins with CRM access. For an admin set to "Only contacts they own" (lesson 12), a new contact is theirs by default.

LESSON 6 · CRM → IMPORT CONTACTS

6 Import contacts from Excel

Choose Add new contacts or Update contacts. Check the file first: valid rows can be imported while rows with problems are kept for download. A whole-file problem or no valid rows stops the import.

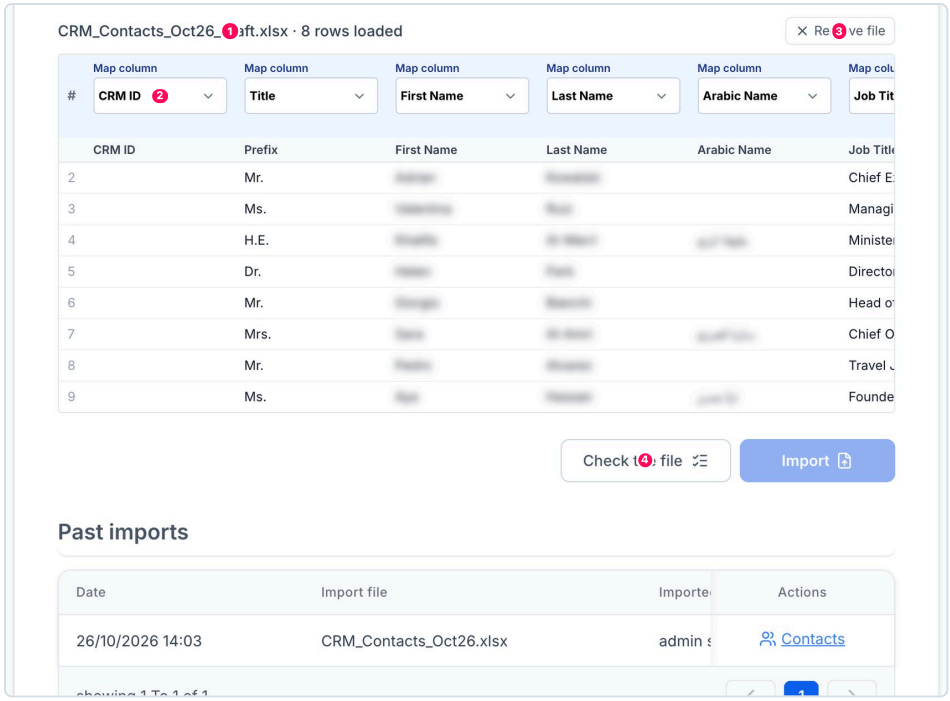

1. **Before you upload**: the rules a file follows, in short.
2. **Choose file**: Excel or CSV, up to 5,000 rows. The *Contacts* sheet is read if there is one; the client's example row is skipped.
3. **Download Excel sample**: first opens a summary of required and optional columns, then downloads the template with working dropdowns from the system's lists.
4. **Check the file** reads every row and lists each problem (next page).
5. **Import** opens after checking when at least one row is valid and the file has no whole-file problem. The summary says how many rows will be kept out.
6. **Past imports**: each file, when, by whom, how many added, updated and not imported. Download the failed rows to fix them. **Contacts** opens the imported contacts.

What a file needs

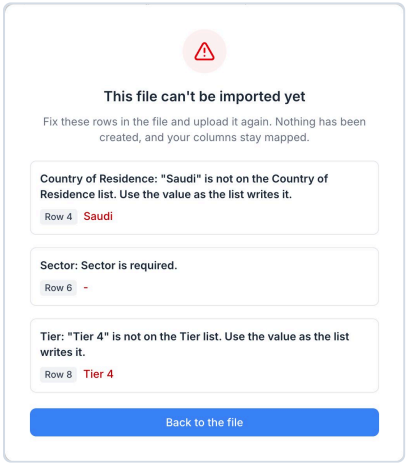

RULE	WHAT IT MEANS
Headings	The template's, or the client's (Prefix, Mobile, Follow-up sent … are read). Columns are matched by heading; any match can be changed before checking.
Required columns	For Add new contacts: Prefix, First Name, Last Name, Email, Category, Sub-category when the category has one, Tier when you may see it, Source List (File Name), List Provided By, and History / Source. Other columns are optional. Use the current sample, not an older required-fields list.
List values	Written as the system's list has them; only case and extra spaces are forgiven. "Saudi" is not "Saudi Arabia". Settings shows every value (lesson 11).
CRM ID	Update contacts requires a CRM ID on every row and updates only that contact. Add new contacts does not update people matched by email; an existing email is reported with the CRM ID and who added it. Use Update contacts for existing contacts.
Never imported	Passport and ID numbers, dates of birth, photos: a file with such a column is refused outright.
Sent Date, Sent By	Read as written (invited outside the system). A file's Invitation Status is last year's record, kept with the row only.
Owner, Follow up	Relationship Owner: an admin of the system, by name or email; otherwise "… is not an admin in the system". Follow up: Yes or No; Y/N, true/false, 1/0, نعم / لا are read too. Both are dropdowns in the template.
Speakers	Import on the Speakers tab with the speakers' own columns. Category Speaker in a contacts import is refused; a contacts update cannot convert a contact to Speaker.

6 Check the file, fix it, import it

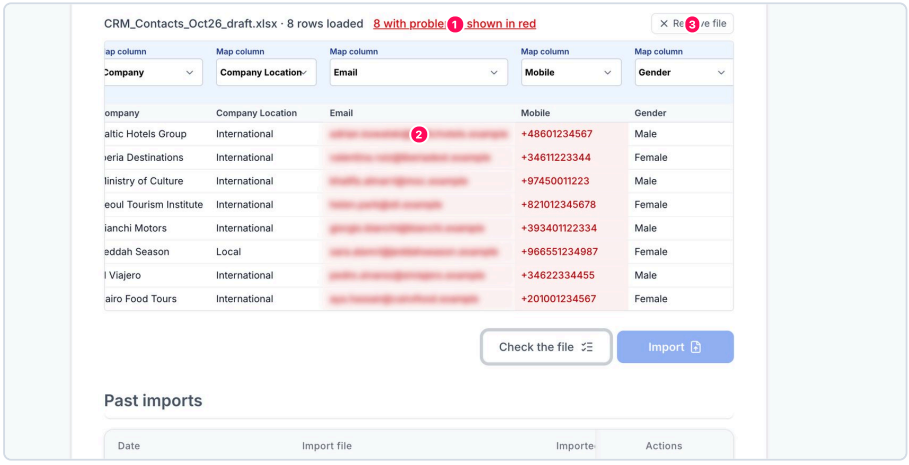

After the file is chosen, its columns and first rows show on screen. Check, read the problems, fix the file, and check again.

1. The file name and how many rows were read (blank rows are skipped).
2. **Map column** above each heading: the field this column fills. Change a wrong match, or choose **Keep with the row only** for a column the CRM has no field for.
3. **Remove file** to start over with another file.
4. **Check the file** sends every row to be checked. A clean file shows a green summary; problems open a dialog.

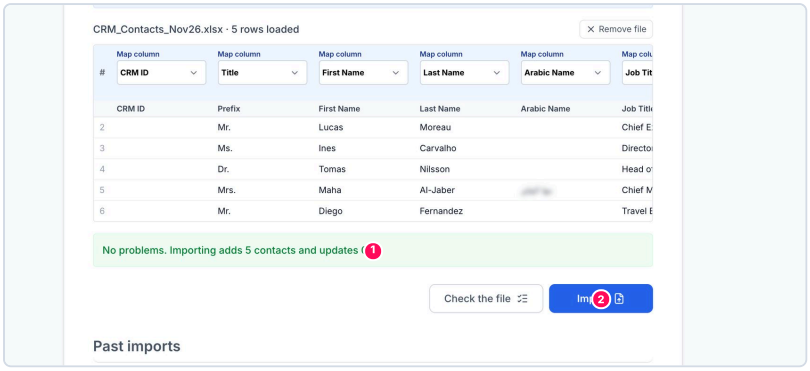

Each problem names the column, the rule and the rows. Nothing was created.

1 "3 with problems" reopens the list. 2 The cells concerned read red in the table. 3 Click a red cell to correct it in the preview, then check again. You may remove a row before checking, download the edited file, or download rows with problems to fix in Excel. Valid rows can be imported separately.

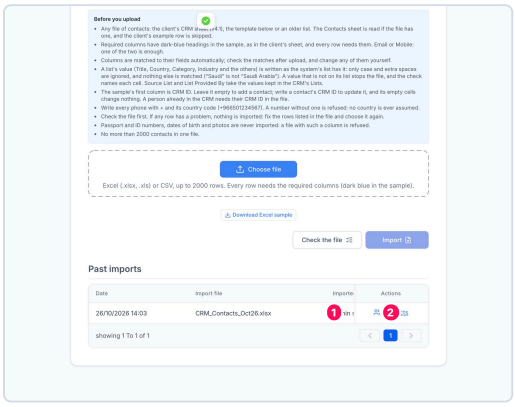

6 A clean file goes in

After checking, the summary shows valid rows, changes and rows with problems. Import processes valid rows; a clean file imports all rows.

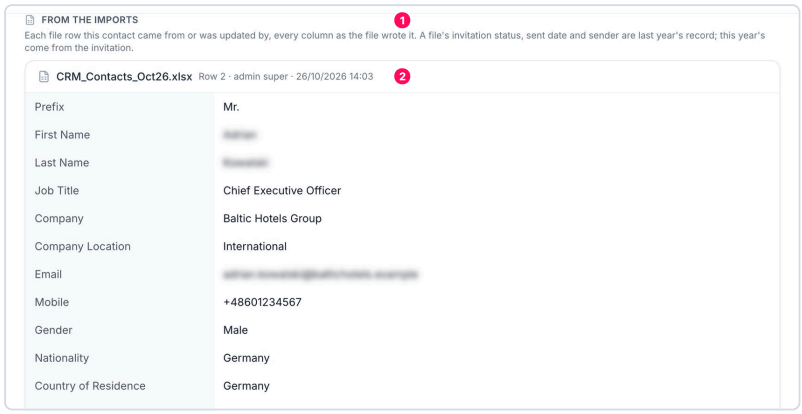

1 "No problems. Importing adds 5 contacts and updates 0." 2 **Import** creates and updates them in one go.

1. Read the summary: how many contacts will be **added**, **updated**, unchanged or not imported. These counts depend on the selected mode and the checked rows.
2. Select **Import**. A message confirms the counts, the form clears, and the file appears under Past imports.
3. Importing never sends anything. The new contacts read **Not Sent** until the team invites them (lesson 8).
4. Each imported contact remembers its file: open the contact and look under **From the imports**.

Past imports after the import: date, file, who imported it, how many added and updated. **Contacts** opens them in the table.

1 **From the imports** on the contact's window: 2 every file row this contact came from or was updated by, each column exactly as the file wrote it. An old file's status columns are marked "record only".

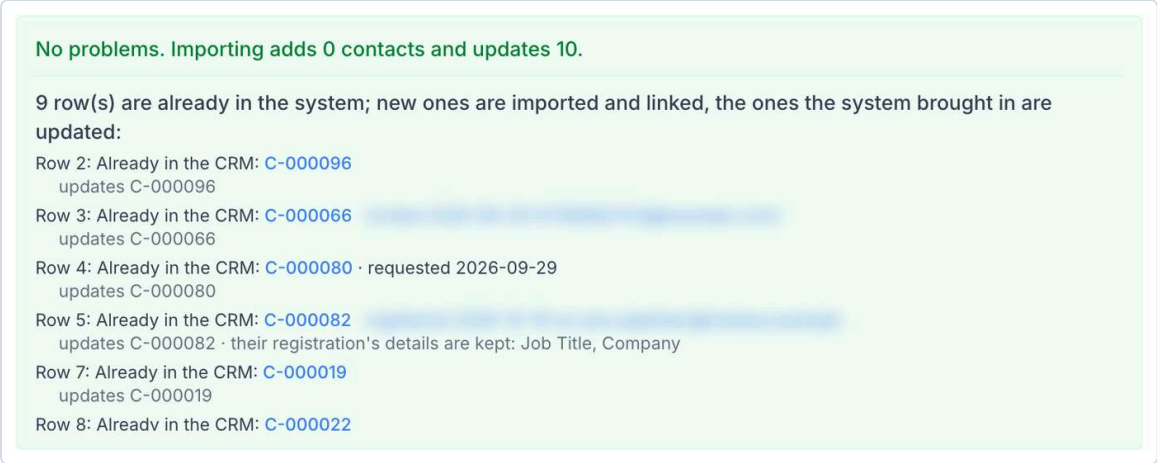

THE SAME PERSON TWICE

The same email or CRM ID twice in one file: both rows are refused, naming each other's row. A shared mobile is a warning, not a reason to merge people. The same first and last name with another email is imported and flagged as a possible duplicate for the team to look at; nothing is ever merged by itself.

LESSON 6, CONTINUED · CRM → IMPORT CONTACTS

6 Who the file matches

The check says, row by row, who is already in the CRM and what importing will change.

After **Check the file**: "Already in the CRM: C-… · invited … · registered … as …", the contact each row updates, and which fields stay as the registration has them.

Matched by email	Current or earlier email, any capitalisation. In Add new contacts, an existing email is refused and the message says who added the contact (an admin or the system). Update contacts identifies the contact by CRM ID; the registration's protected fields stay as registered. The Speakers import can match existing speakers by email.
Fields that change	Listed with readable column names; those kept from the registration are named too.
Same name only	A new contact, with "Similar name: C-…" to check.
Same mobile	A new contact, with "Same mobile as C-…". A mobile never links two rows.
Rows kept out	Invalid values, missing required fields, duplicate email or CRM ID, a contact outside your access, or a speaker in a contacts file. A whole-file problem such as a forbidden personal-data column stops all rows.

TEST FILES

`tourise-docs/client/CRM_IMPORT_TEST_CASES/` holds two files built from the template: **TEST_1_valid** (10 rows that should all import) and **TEST_2_errors** (6 rows, each with its own problem; none can be imported until a row is fixed). Each has a Test cases sheet saying what every row should do, with a Result column to fill in. They change real contacts: use them on a local or test system only.

LESSON 6, CONTINUED · UPDATE CONTACTS

6 Update from an exported file

Change existing contacts using the same file the Contacts table exports.

1. Filter or select the contacts on Contacts → Data, then **Export**.
2. Edit the cells in Excel. Keep the **CRM ID** on every row: it identifies the contact, even if its email changes.
3. Open **Import contacts → Update contacts**, choose the file, map the columns and **Check the file**.
4. Review the changes, then import valid rows. Download the rows kept out to correct and check again.

Empty cells	Leave the existing value unchanged. To clear a field, use Edit.
What cannot change	System status and Region are calculated; registration-owned fields stay as the guest gave them. Speaker rows use Import speakers.
Rows kept out	Missing or unknown CRM ID, a contact outside your access, a speaker, duplicate identifiers, or invalid field values. New people belong in Add new contacts.
Access	The role needs **Update import**. Add new contacts uses Create. Each mode has its own past-import list.

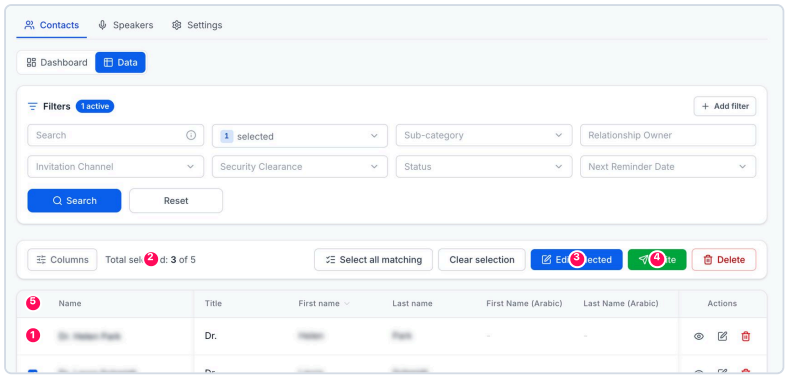

CHECK AGAIN AFTER EDITING THE PREVIEW

Changing a cell, mapping or row invalidates the previous check. Check again before importing. Download the edited file to keep the corrections you made on screen.

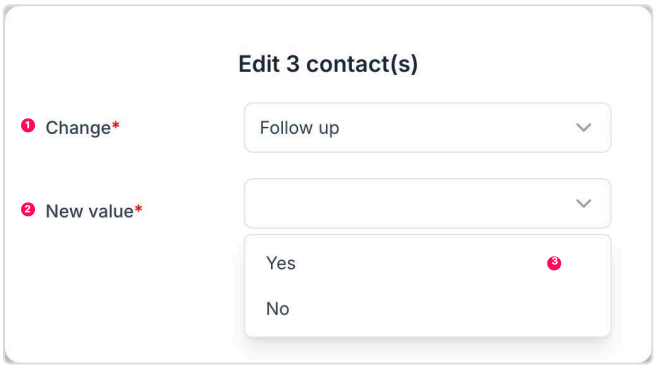

LESSON 7 · TICK CONTACTS → EDIT SELECTED

7 Change many contacts at once

Set one field on every ticked contact: a status, a channel, a clearance, an owner, or any list value.

1. Tick the contacts, one by one, or the box in the heading for the whole page.
2. **Total selected** counts them across pages.
3. **Edit selected** opens the dialog below. **Archive** moves the ticked contacts out of the active list after confirmation. Bring them back from **Archived**; permanent deletion is a separate action there.
4. **Invite** is the other bulk action (lesson 8).
5. **Select all matching** ticks everyone the filters find, up to 2,000: a filter defines the batch.

1 **Change**: the field, here Follow up. 2 **New value**: 3 Yes or No. Then **Save**.

What can be changed in bulk

The team's fields	Invitation Status (Not Sent, In Progress, Pending) · Invitation Channel · Security Clearance · Relationship Owner (an admin) · Follow up (Yes, No) · Invitation Sent Date · Invitation Sent By
Any list	Title, Company Location, Gender, Nationality, Country, Sector, Industry, Seniority, Category, Tier, Source List and History / Source. List Provided By is entered as text. A Category asks for its Sub-category, an Industry for its Sub-industry.
The rules	Each contact is checked as if edited alone. Those that pass are saved; the rest are listed with the reason. Ticked speakers are changed too (with the speakers' Update box). Fields kept from a registration are left as registered, and listed.

WHO DID IT

Every bulk change is written to each contact's History and to the Audit trail, with the admin's name.

LESSON 7, CONTINUED · ARCHIVED

7 Archive, restore or delete permanently

Remove a contact from the active CRM while keeping its data, history and links.

Archive	Use Archive on the contact window or select rows and Archive on the table. Confirm. The contact leaves the active list.
Open Archived	Select **Archived** above the table. Contacts and Speakers have their own archive pages, with Archived on and Archived by columns.
Restore	Select the archived contacts and restore them to the active list. View archived grants access and restore.
Delete permanently	Available only in Archived, with its separate permission and confirmation. It removes the CRM contact for good; linked invitations and registrations stay in their own sections.

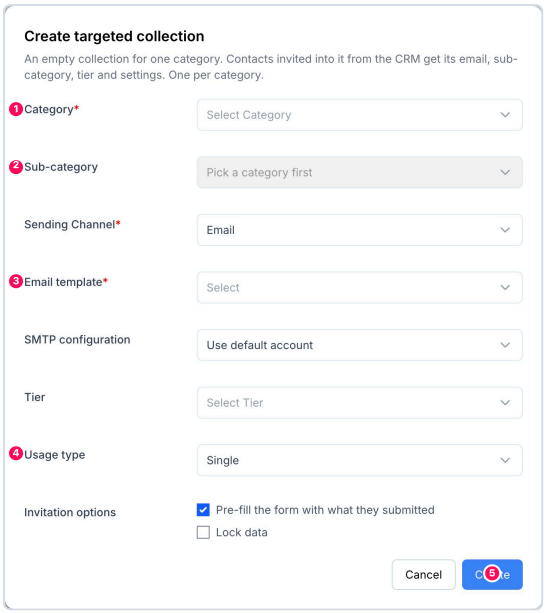

ACTIONS ON ONE CONTACT

The contact window now offers Invite and Archive at the top when your role allows them; no table selection is needed.

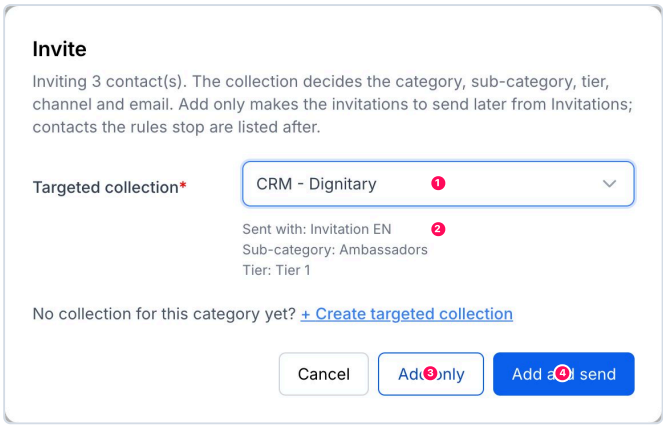

LESSON 8 · TICK CONTACTS → INVITE

8 Invite contacts

Invite the ticked contacts into their category's CRM collection. The collection decides the email, the sub-category, the tier and the link settings; the CRM only says who.

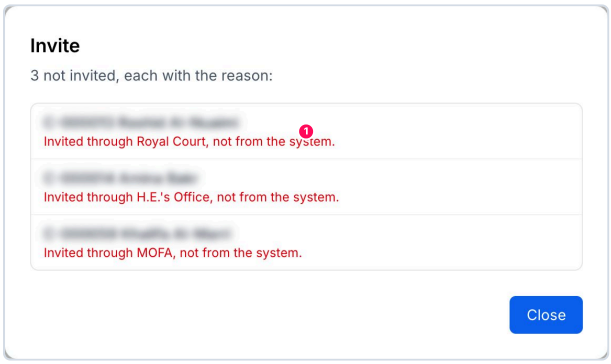

Create targeted collection, once per category: 1 category, 2 sub-category, 3 email template, account and tier, 4 usage, then 5 **Create**. It appears on Invitations as "CRM - Category".

1 The collection; 2 what every invitation will carry; 3 **Add only** or 4 **Add and send**.

1. Tick the contacts, select **Invite**, and pick the **Targeted collection** of their category; a missing one can be created from the link.
2. Under the field: the email template, the sub-category and the tier every invitation will carry.
3. **Add only** creates the invitations without sending. The Status column and journey read **Added**; the team's Invitation Status is In Progress. Send later from Invitations.
4. **Add and send** makes and sends them now. The journey reads Added until the email goes out, then Sent; the team's Invitation Status starts at In Progress.

After **Add only** or **Add and send**: the contacts the rules stopped, each with its reason. The others have an invitation created: Added in tracking, In Progress in the team's Invitation Status, then Sent once sent. Ticked speakers are invited too (no channel or clearance check), with the speakers' Invite box.

Who is skipped, and why

Channel is not CRM	"Invited through H.E.'s Office, not from the system." That invitation goes out through the office. The same for MOFA, Royal Court, Other Ministries and Relationship Owner.
Clearance not Approved or Not Required	"Security clearance pending", "not submitted", or "not approved: escalate to Fahad".
Already invited, sent or registered	Nobody is invited twice, even when the first invitation was made on Invitations.
No address	An email collection needs an email; SMS or WhatsApp needs a mobile. A pending request does not block inviting from the CRM; it stays in Invitation Requests and is not automatically accepted.

LESSON 9 · THE STATUS COLUMN, AND THE WINDOW

9 Follow where each contact is

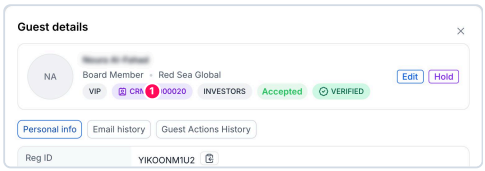

For every contact the system reads the real request, invitation and registration, and shows the furthest step reached. Nothing here is typed, except the team's note on In CRM.

STAGE	REACHED WHEN	SHOWN WITH
In CRM	Known, not invited yet.	The team's note: Not Sent, In Progress, Pending
Requested · ✕ Rejected	They asked for an invitation; Rejected when the request was turned down.	The request's status; link to it
Added	An invitation has been created but has not been sent. Add only reaches this stage; it does not contact the person.	The collection
Sent	The invitation went out.	Delivered, Opened, or ↳ Not delivered
Registered · ✕ Not accepted	They filled in the form; Not accepted when the team rejected or cancelled it.	The registration's status: Pending, On-hold, Accepted
Confirmed · ✕ Declined	Registration accepted and they said they are attending; Declined when they said no. A Yes while still Pending reads "Registered (Pending) · attending: yes".	Date
Checked in	Scanned at the gate.	Date and time

Where they are, and how they came in

Every status says **where** the person is, as a link that opens it: **in Invitation Requests** · **in Invitations** (the collection) · **in Guests** (the category) · **only in the CRM**. Under it, smaller, **how they came in**: via CRM · via Invitations · via Request · Registered by themselves · via Guests import · added in Guests.

For example: *Sent · in Invitations (VIP 2027), via CRM*; *Requested (Pending) · in Invitation Requests, via Request*; *Registered (Accepted) · in Guests (Media), Registered by themselves*.

On Guests and on Invitations, a 1 **CRM C-000020** chip shows which contact the person came from and opens it in the CRM.

FILTERS MADE FOR FOLLOW-UP

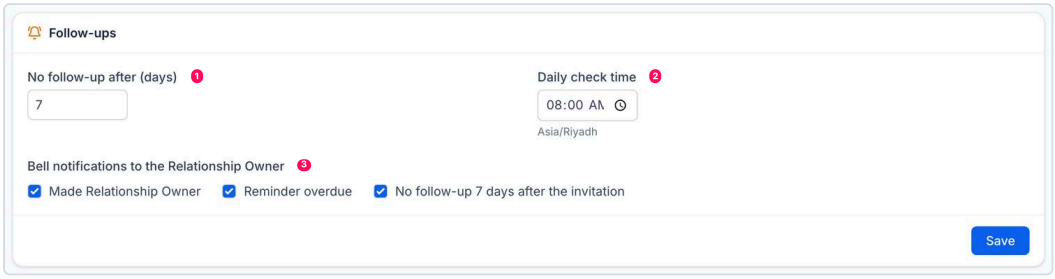

Status finds every contact at a stage. **Sent, not opened** (3+, 7+, 14+ or 30+ days) lists the invitations to chase. **Sent, not registered** lists those who opened but never registered. **Needs follow-up** lists those the next page describes.

LESSON 9, CONTINUED · FOLLOW-UPS

9 Who needs following up

The system tells each Relationship Owner who needs a call, by a bell in the table and a daily alert.

Why	**Reminder overdue**: the Next Reminder Date has passed. **No follow-up after the invitation**: sent N days ago or more (7 by default), Follow up still empty, nothing in the Activity Log since, and no answer yet.
The bell	An amber bell beside the name, in the table and in the window's header. Hover it for the reason and the days overdue; click it to **Log activity**.
The badge and filter	"🔔 N need follow-up" above the table filters to them; the **Needs follow-up** filter does the same, by reason. Combine it with Relationship Owner to see one owner's list.
Alerts	Every day at 08:00 (Riyadh time) the owner gets a bell 🔔 alert in the header for each contact that needs following up, once per reason. They are also alerted when they are made a contact's Relationship Owner, once with the count for a bulk change or an import.
Only owners	Only a contact with a Relationship Owner (an admin) needs following up: the owner is who is told.

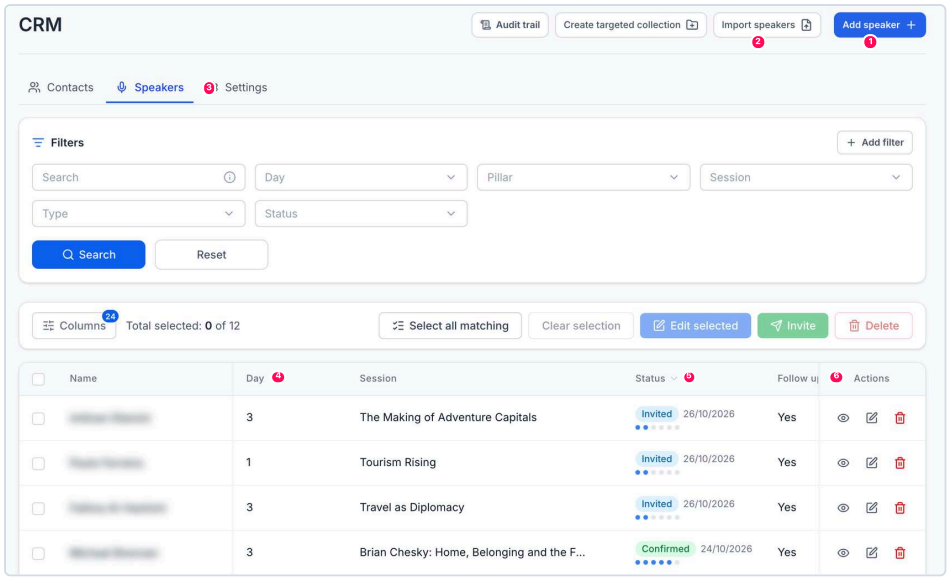

CRM → Settings, **Follow-ups** (the Settings box): 1 how many days after the invitation, 2 the daily check time, 3 which alerts the owner gets. **Save** applies them.

LESSON 10 · CRM → SPEAKERS

10 The Speakers tab

Everyone is a contact: a speaker is a contact whose Category is **Speaker**. The Speakers tab shows the speakers alone, with the programme's columns, to list, add, edit and import them. It has no dashboard.

1. **Add speaker**: the form in the speakers' groups: Session, Speaker, Invitation, Contact person, Profile.
2. **Import speakers**: the team's Speaker Required Fields sheet. This is where speakers are imported with their own columns.
3. The tab opens straight on its table: no Dashboard switch.
4. The speaker-only columns, here Day and Session: Day, Pillar, Session, Keyword, Type, Option #, Continent, Bio, Social Handles and the rest show on this tab only.
5. **Status** works as for contacts: the team's status until invited, then the journey.
6. **Follow up**: Yes or No.

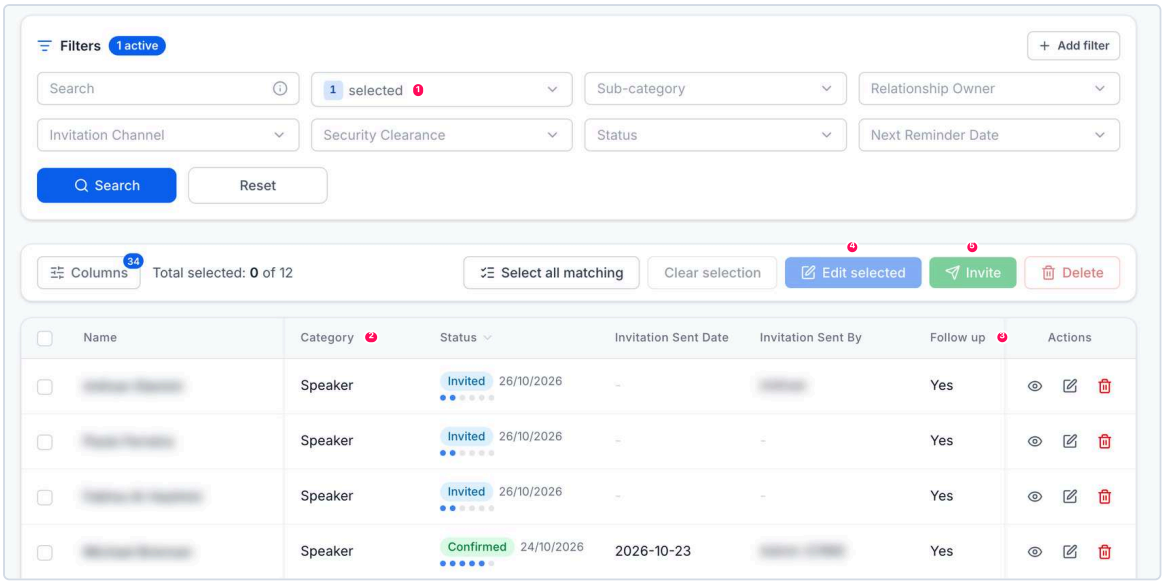

How speakers differ

The speakers' form	On this tab, every column of the speakers' sheet is required for now, on the form and in a speakers' file.
The speakers' lists	Day, Pillar, Session (the programme's 57), Type, Continent, and *Official invite to be sent by* (a title); read-only in Settings.
No channel, no clearance	Inviting skips only those already invited, sent, registered, or without an email. Speakers go into the Speaker category's collection ("CRM - Speaker").
One email, one record	An email is on one person only, speaker or not.
Its own window	A speaker opens in the speaker's window from either tab (Session, Speaker, and Invitation with Sent Date, Sent By, Follow up); **Edit** opens the speaker's form.

LESSON 10, CONTINUED · CRM → CONTACTS

10 Speakers on the Contacts tab

The Contacts tab lists everyone, speakers included, for an admin with the speakers' View box. Filter Category = Speaker to see them there.

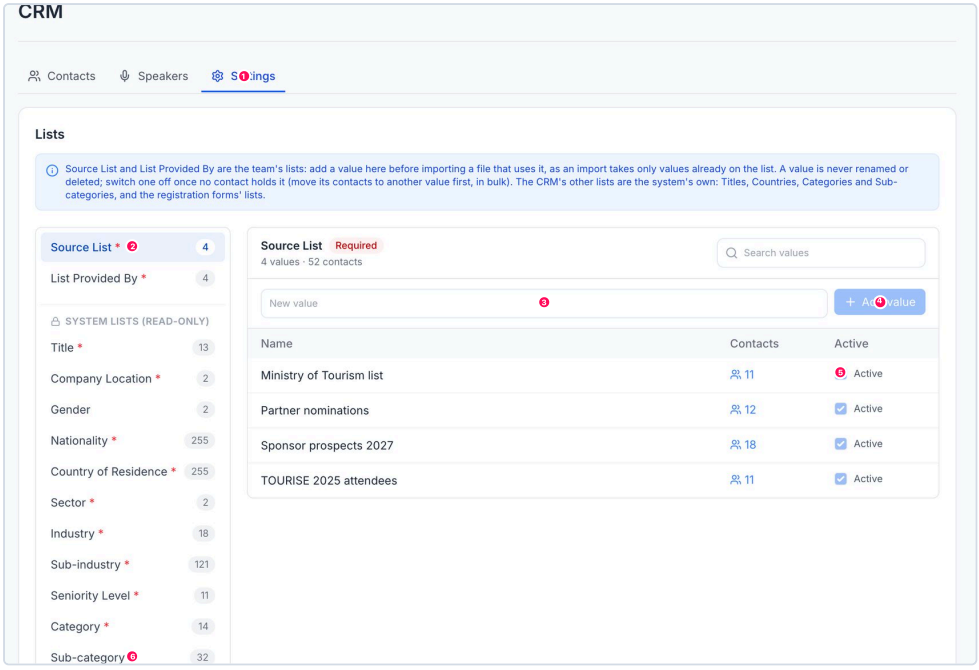

Contacts, filtered 1 Category = Speaker: the same twelve speakers, with the common columns. 2 Category reads Speaker; 3 Follow up; 4 Edit selected and 5 Invite take them too.

Find them	Filter **Category = Speaker**. There is no Type column; the speaker-only columns (Day, Pillar, Session, Bio, Keyword…) show on the Speakers tab only.
Edit in place	A cell edited on Contacts shows on the Speakers tab. It needs both Update boxes: the contacts' and the speakers' (lesson 12).
Bulk and Invite	Edit selected and Invite include the ticked speakers. A row your role cannot change comes back as failed, with the reason.
Change Category	To Speaker makes a speaker, its speaker-only fields empty; away from Speaker removes its speaker details, recorded in History (lesson 5).
Import	Speakers with their own columns are imported on the Speakers tab (Import speakers). A contacts-file row with Category Speaker is refused; use Import speakers. Update contacts does not update speakers.

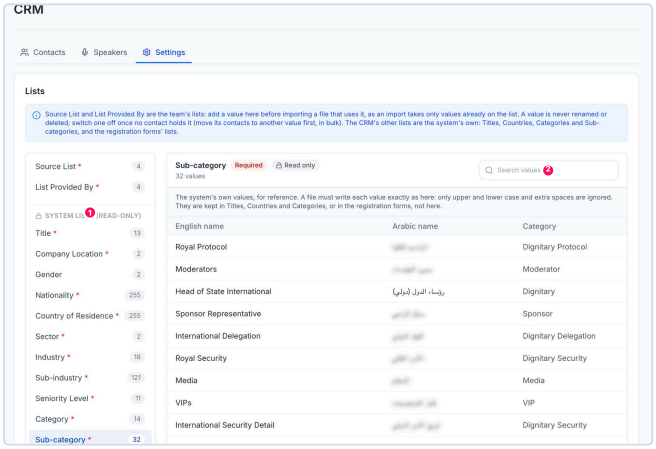

LESSON 11 · CRM → SETTINGS

11 Settings: the lists

Settings opens with two boxes: **In the system** (the read-only sync status, page "Where everyone comes from") and **Follow-ups** (lesson 9). Below them, the lists. Source List (File Name) is the team's editable list. List Provided By is now typed freely on the contact or in the file. Every other list is the system's, shown here so a file can be written to match it.

1. The **Settings** tab. A red star marks the lists every contact needs a value from.
2. **Source List (File Name)**: the team's list. Add a value here *before* importing a file that uses it. List Provided By needs no Settings value.
3. Type the new value and **Add value**. A value is never renamed or deleted.
4. Untick **Active** to switch a value off once no contact holds it (move them in bulk first, lesson 7). It stays on old records and is no longer offered.
5. The count opens the contacts holding that value.
6. The **system lists**, read-only: Title, Company Location, Gender, Nationality, Country, Sector, Industry, Sub-industry, Seniority, Category, Sub-category, Tier, History / Source. They are kept in Titles, Countries, Categories and the registration forms.

A system list, read-only: the English and Arabic name of every value, and for Sub-category and Sub-industry the parent each sits under.
2. Search a long list.

Why the exact spelling matters

A file is matched to these lists exactly as written here, forgiving only case and extra spaces. Whoever cleans a client's file can open the list, search it, and copy each value as it is.

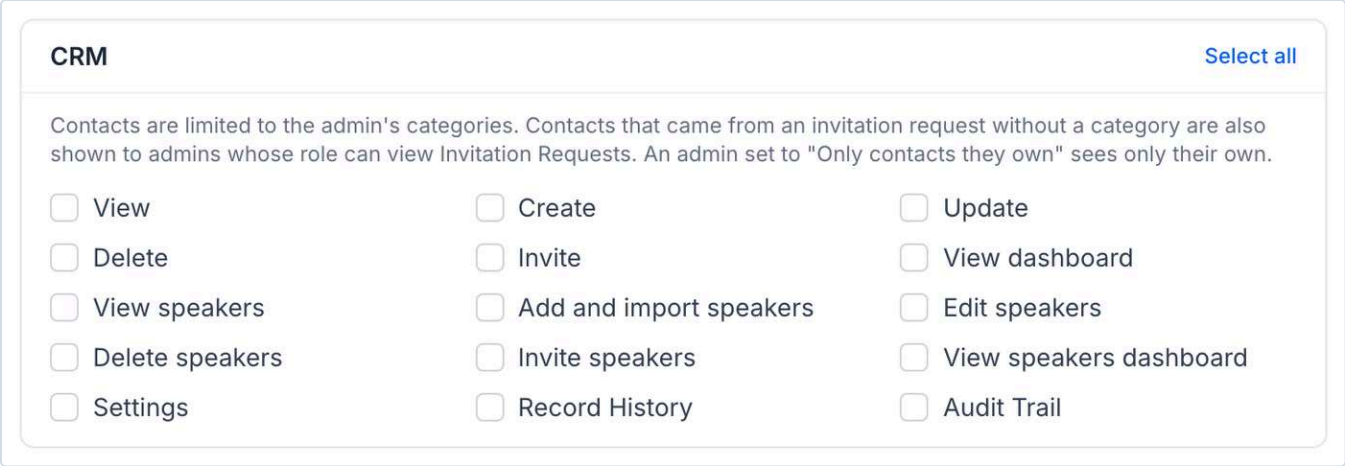

Sub-categories

A Super Admin enters them in **Management → Categories**, on each category. A category with no list asks for no sub-category.

LESSON 12 · MANAGEMENT → ROLES

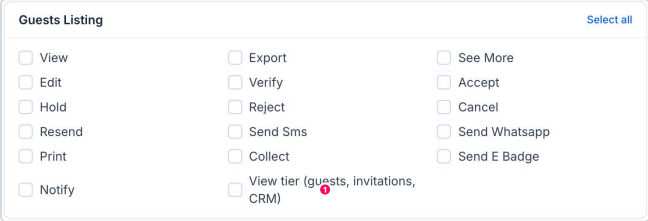

12 Who can do what

The CRM is switched on per role, box by box. Each admin then works within the categories on their own account.

The CRM card in the role editor: the contacts' boxes, Invite, the speakers' own boxes and the shared ones. The hint at the top says who sees which contacts.

BOX	WHAT IT OPENS
View	The Contacts tab and its table, the window, search and filters, the CRM chip on Guests and Invitations.
View dashboard	The Contacts dashboard. Without it the tab opens on the table.
Create	Add contact, Import contacts, Download Excel sample.
Update	Edit, the pencil in the window and in the cells, Edit selected, the photo. A speaker's row on Contacts also needs **Edit speakers**.
Archive	Archive one contact or the ticked contacts, keeping their data and links.
View archived / Delete permanently	Separate boxes: View archived opens the archive and allows restore; Delete permanently removes archived contacts for good.
Update contacts by import	Its own box, Update import, opens the Update contacts mode; Create opens Add new contacts.
Invite	Create targeted collection, and Invite.
View speakers … Invite speakers	The same for the Speakers tab: view, add and import, edit, archive, restore and delete permanently, invite (with the corresponding boxes). **View speakers** also lists the speakers on Contacts. **View speakers dashboard** is still in the list but opens nothing: there is no speakers dashboard.
Settings	The Settings tab: adding and switching off the team's list values.
Record History	The History button on a contact's window.
Audit Trail	The Audit trail button: every CRM action, with export.

Tier is not a CRM box: 1 **View tier (guests, invitations, CRM)**, under Guests, shows and hides Tier everywhere at once.

Categories, not roles, draw the line

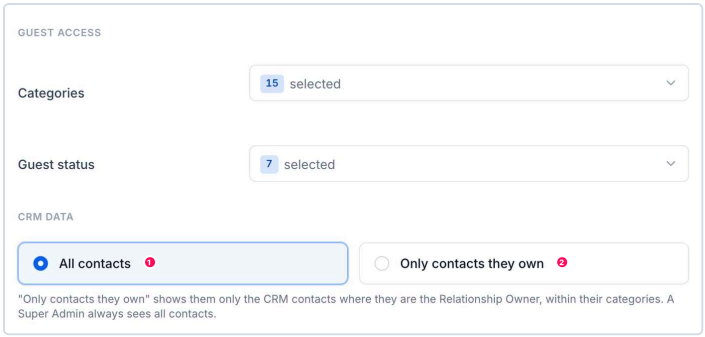

What an admin may *do* comes from the role. *Which contacts* they see comes from the categories on their admin account (Management → Admins), the same scope that limits Guests and Invitations. An admin limited to Sponsor sees, imports, edits and invites Sponsor contacts only; a file with a Dignitary row is refused for them. A Super Admin sees all.

Without **View tier** the Tier column, filter, chart and field are simply not there, and an import ignores a Tier column.

LESSON 12, CONTINUED · MANAGEMENT → ADMINS

12 Which contacts each admin sees

Besides the role, two things on an admin decide which contacts they see: their categories, and their CRM data setting.

On each admin's page, **CRM data**: 1 All contacts or 2 Only contacts they own.

All contacts	Every contact in their categories.
Only their own	Only the contacts where they are the Relationship Owner, within their categories. They get alerts only for those, and a contact they add is theirs by default.
Requests	Contacts from an invitation request with no matching category are shown to admins whose role can **view Invitation Requests** (with the CRM View box).
Super Admin	Always sees every contact.

RELATIONSHIP OWNER IS AN ADMIN ACCOUNT

The owner is picked from the admins with CRM access, so a renamed admin is renamed on their contacts too. A file may name them by name or email. An old owner typed as text reads "Was: … (not an admin account). Pick an admin." until it is changed.

REFERENCE

The fields of a contact

The CRM fields, in the client's groups. Required marks follow the current new-contact template; the update import needs only CRM ID and fields you want to change. ● = every contact needs it. **List** = one of the system's values (lesson 11); **Team list** = kept in Settings; **Fixed** = the template's own values; **Text** = typed; **System** = filled by the CRM, never typed.

FIELD	KIND	NOTES
IDENTITY		
CRM ID	System	C- and six digits, one per person, shown on Guests and Invitations as a link. Required on every row of Update contacts; use the CRM ID from Export. Add new contacts is for new people only.
Source	System	Where the contact first came from: the CRM, Invitations, a request, a registration, Guests, the Guests import.
Earlier email	System	The invitation's email, kept when they registered with a new one. Still matches them.
Title ●	List	"Prefix" in the client's sheet: Mr., Ms., Dr., H.E., H.R.H. Prince …
First Name, Last Name ●	Text	As per passport where known.
First and Last Name (Arabic)	Text	A file's "Arabic Name" is split on its first space.
Job Title, Company	Text	One spelling per company.
Company Location	List	Local, International.
Email ●**; Mobile**	Text	Email is required for a new contact and belongs to one person only. Mobile is optional and may be shared ("Same mobile as"); write + and digits.
Gender	List	Male, Female.
Nationality, Country of Residence	List	The system's countries.
Region	System	From the Country of Residence (MENA, Europe, Asia …).
CLASSIFICATION		
Sector	List	Public Sector, Private Sector.
Industry, Sub-industry	List	Optional. If Sub-industry is supplied without Industry, the import fills its parent Industry; an incompatible pair is refused.
Seniority Level	List	Head of State / Royalty, Minister, Chair / Founder, CEO, C-Suite … Student.
Category, Sub-category ●	List	One of your categories; the Sub-category under it, required when the category has a list. **Speaker** makes the contact a speaker (lesson 5).
Tier ●	List	Tier 1, 2, 3. Seen and set only with the View tier box.

REFERENCE

The fields of a contact, continued

FIELD	KIND	NOTES
RELATIONSHIP AND SOURCE		
Source List (File Name) ●	Team list	Added in Settings before use; identifies the source file.
List Provided By ●	Text	Type the provider; no predefined list or Settings entry is needed.
Relationship Owner	Admin	An admin account with CRM access, picked from a list (a file may write the name or the email); renames follow. An "Only their own" admin is the default owner of what they add. An old text owner stays until edited.
INVITATION		
Invitation Channel	Fixed	H.E.'s Office, MOFA, Royal Court, Other Ministries, Relationship Owner, CRM. CRM or an empty channel can send from the system; other selected channels go through their office.
Security Clearance	Fixed	Not Required, Not Submitted, Pending, Approved, Not Approved.
Invitation Status	Fixed	The team sets Not Sent, In Progress, Pending. Sent, Accepted, Declined come from the invitation.
Invitation Sent Date, Sent By	Text, date	Typed by hand for a guest invited outside the system, on the form, in a cell, in bulk or in a file. When the system sends, it fills each only if empty: the date of sending, and the admin's name (or "System").
FOLLOW-UP AND HISTORY		
Follow up	Fixed	Yes or No, empty until someone says. Replaces Follow-up Owner.
Last Contact Date, Next Reminder Date	Dates	A reminder that has passed reads orange; filter by Overdue or This week.
History / Source ●	Fixed	TOURISE 2025 Data, External Event, Manual Invitation (2027), Other.
Received By, Previous Engagement, Previous Category, Notes	Text	The first three come from a file and are shown as written; Notes is edited freely.

THE SPEAKERS' FIELDS

A speaker is a contact in the Speaker category. On the Speakers tab it has the sheet's columns: Day, Pillar, Session, Keyword, Type, Option #, First and Last Name, Gender, Title, Organization, Country, Continent, Notes, Program Team Relationship Owner, Network to leverage, Speaker Email, Contact Person, Official invite to be sent by, Contact Email, Invitation Sent by, Follow up (Yes or No), Bio, Social Handles; every one required there for now. The speaker-only ones (Day, Pillar, Session, Keyword, Type, Option #, Continent, Network, Contact Person and Email, Official invite, Bio, Social Handles) show on the Speakers tab only.

REFERENCE

Rules at a glance

Channel, clearance and speakers

RULE	WHAT THE SYSTEM DOES
CRM or an empty channel sends	A contact on any other channel (H.E.'s Office, MOFA, Royal Court, Other Ministries, Relationship Owner) is never invited from the CRM: that invitation goes out through the office. The team follows it with In Progress, Pending and the notes.
H.E.'s Office needs a clearance	Not Required cannot be chosen with that channel, on the form, in a cell, in bulk or in a file.
Clearance gates sending	An empty Security Clearance does not block inviting. When filled, only Approved or Not Required allow it; Not Submitted and Pending wait, and Not Approved says "escalate to Fahad".
One person, one CRM ID	Matched by the link or email (current or earlier), never by mobile or name alone. The guest's details win.
A speaker is a contact	Category = Speaker makes a speaker; its row also needs the speakers' boxes.
Checked in bulk too	Inviting 200 with 30 stopped invites 170 and lists the 30 with a reason each; a bulk edit works the same way.

The two statuses, side by side

STATUS	WHO SETS IT	WHEN
Not Sent	The team	Every new contact starts here.
In Progress	The team, or the system	Being worked on; set by the system when an invitation is made (Add only).
Pending	The team	Waiting on something: a clearance, an office, an answer.
Requested	The system	From the invitation request.
Sent	The system	The invitation was sent. Sent Date and Sent By are filled only if empty; a value typed by hand stays.
Accepted · Declined	The system	From the invitation and the guest's answer. Shown in the Status column as Registered, Confirmed or Declined.

What is never done by itself

No sending on import	A file only fills the CRM. Invitations are made and sent in lesson 8, by someone.
No sending on a status change	Setting a status, alone or in bulk, sends nothing.
No guessing, no merging	A value that does not match its list keeps that row out; other valid rows can import. A possible duplicate by name or mobile is flagged, never merged.

QUICK HELP

When something doesn't work

PROBLEM	WHAT TO DO	LESSON
The CRM is not in my menu	It is in **Overview**, under the dashboards. If it is not there, your role has no CRM box: ask a Super Admin to tick View (and the rest you need).	1, 12
The dashboard's Sent differs from the contact's status	It reads the real invitation: a Sent Date typed by hand does not count as Sent there.	1, 9
I see fewer contacts than my colleague	You see your categories only, and only your own contacts if your CRM data is "Only contacts they own". Ask a Super Admin.	12
The file "can't be imported yet"	Read the problems. Correct red cells in the preview and check again, or download the failed rows and fix them in Excel. Import valid rows when offered. Whole-file problems must be fixed first.	6, 11
"Not on the Source List list"	Add the value in Settings first, then check the file again.	11
"This email is already on CRM contact C-000…"	The person is in the CRM already. Use Export and Update contacts with that CRM ID, or edit the contact. Add new contacts does not update an existing email.	6
The file has a passport or ID column	Remove the column and choose the file again. Such data is never imported.	6
A mobile is refused	Write it with + and the country code: +966501234567.	6
Invite is grey	Tick at least one contact first. If the button is missing, your role has no Invite box.	8, 12
"No targeted collections" in the Invite dialog	Create the category's collection from the link in the dialog, or with Create targeted collection.	8
A contact was "not invited"	Read its reason: the channel sends elsewhere, a filled clearance is not Approved or Not Required, or the person already has an invitation or registration.	8
"… is not an admin in the system"	The owner must be an admin, by name or email. Pick from the list or the template's dropdown.	5, 6
Where are the speakers, and their dashboard?	On Contacts and on its dashboard, filter Category = Speaker (shown with the speakers' View box). There is no speakers dashboard and no Type column any more.	1, 10
I can't edit a speaker's cell on Contacts	It needs Edit speakers as well as Update. In bulk, such rows come back as failed with the reason.	7, 12
A file "Write Yes or No"	Follow up takes Yes or No (also Y/N, true/false, 1/0, نعم / لا). Use the template's dropdown.	6
I cannot set the status to Sent or Accepted	Those come from the invitation. The team sets Not Sent, In Progress and Pending only.	9
A field says "from the registration" and can't be edited	The person registered: change it on the guest.	4
"Same mobile as C-…" or "Similar name"	Two contacts look alike. Check them: nothing is merged by itself.	·, 6
I get no follow-up alerts	Only the Relationship Owner (an admin) is told, and only for the alerts switched on in Settings.	9
Tier is nowhere to be seen	Your role lacks View tier (under Guests in Roles).	12
No Sub-category can be chosen	The category has no list yet. A Super Admin adds sub-categories under Management → Categories.	11
A Source List value cannot be switched off	Contacts still hold it. Move them to another value in bulk, then switch it off.	7, 11

APPENDIX · UPDATED 29 OCTOBER 2026

CRM cases at a glance

CASE	CURRENT BEHAVIOUR
In the CRM only	The person can register on an available public form or request an invitation. CRM membership alone never means already registered.
Invitation created, not sent	Tracking reads Added. No email was sent. A public registration or invitation request is still allowed if there is no earlier registration or request.
Invitation sent	Tracking reads Sent, with delivery and opening details. Registration changes it to Registered.
Already registered	The public email check reports already registered. A new registration is not created with that same email.
Already requested	The request form reports already requested. Pending and rejected requests do not enter the CRM by themselves; acceptance creates an invitation and links the contact.
Registers before our invitation	The registration links to the existing contact by email, keeps the CRM ID, and updates the registration fields. The person is not invited again from the CRM.
Add new contacts finds an existing email	The row is kept out. The message names the contact and who added it. Export and use Update contacts to change it.
A file has good and bad rows	Import the good rows and download the bad ones with their reasons. A whole-file problem or no good rows prevents importing.
Archive	The contact leaves the active list and keeps its history and links. Restore from Archived; Delete permanently is a separate permission and confirmation.

Invitations, collections and sending are covered in the Admin Panel Tutorial. This table replaces the older screenshot of the cases sheet.

CAN SOMEONE IN CRM REGISTER BEFORE BEING INVITED?

Yes. A CRM contact alone, or an invitation created but not sent, does not trigger an “email already exists” message on the public forms. Registration checks existing Guests; Request an invitation checks existing Guests and previous requests. After registration, the system links the guest to the same CRM contact by email and updates its journey. No invitation is sent by this link.
