

Using the Admin Panel

The everyday jobs in the TOURISE 2027 admin, in short: reviewing guests, sending invitations, and running the event on site. Screens and wording as of 21 September 2026.

Getting in

Sign in	Email and password, then enter the code emailed to you and select Verify now . No code? Wait for the countdown, select Resend , and check spam. Forgot your password? sends a reset link.
Language	English or Arabic, from the switch in the top bar. Arabic switches the layout to right-to-left.
What you see	Your role decides which screens are in your menu. Your data scope decides which guests you see. If a screen is missing or your guest list is empty, ask a Super Admin.

Where things are

MENU GROUP	SCREENS
Overview	Dashboard · Guests · Dignitary Parties · Invitations · Invitation Requests
Management	Admins · Roles · Categories · Titles · Guest Status
Communications	Emails · SMS · WhatsApp · Automation · Logs
Operations	Guest Drafts · Countries · Newsletter · Badges · Import · API keys · Gate scanning · Gates scans
Logistics	Hotels · Traveling Status · E-Visa

You only see the screens your role allows, so your menu may be shorter.

The dashboard

It shows live registration figures: key totals, the daily trend, status by category, the audience profile, and invitations and requests.

- The **filters** at the top (category, seniority, status, region, industry, date) apply to every figure.
- Click any bar or slice to filter by it. Click it again to clear.
- **Print report** prints the page as a landscape report, stamped with the time.

IN THIS GUIDE

1 Getting in and the dashboard · 2 Reviewing guests · 3 Inviting guests · 4 Setting up and running the event · 5 Admins and troubleshooting

Reviewing guests

Everything happens in **Overview → Guests**. The buttons on a guest's row depend on their status and on your role.

BUTTON	SHOWN WHEN THE GUEST IS	WHAT THE GUEST RECEIVES
Accept	Pending On-hold	The category's "on accept" email, plus SMS or WhatsApp if set
Reject	Pending On-hold	The category's "on reject" email, plus SMS or WhatsApp if set
Hold	Pending Accepted Rejected Canceled	Nothing. It reopens a rejected or canceled guest.
Cancel	On-hold	Nothing
Resend · Send SMS · Send WhatsApp	Accepted Invited	Their confirmation again, on that channel
Print · Collect	Accepted Invited	Nothing. The row is marked Printed or Collected.
Send e-badge	Accepted Invited	Their digital badge
Notify for missing data	Accepted Invited	A request to complete missing fields
Request onboarding	Accepted speakers and moderators	A request for their onboarding material

The messaging, printing and badge buttons also need that feature switched on in the guest's category. **Provider not configured** on a greyed-out button means that channel isn't set up yet. Some categories move a guest when you accept them (for example Request Invitation → Attendee). The accept dialog tells you when this will happen.

Finding, editing and exporting

Filters	Status, category, Reg ID, name, email, company, nationality, attendance, companions and more. Reset clears them.
See more (eye)	Every form step the guest filled in, plus Email history and Actions history (who did what, and when).
New Guest	Choose the category, fill in its form, and save.
Edit (pencil)	The same form the guest filled in. The Logistics tab holds their flights and hotel.
Export	All (Excel) , Export Guests or Equipment lists (ZIP) . With filters on, only the filtered guests are exported, so filter first.
Guest Drafts	Registrations people started but never submitted. The list is read-only, and you can export it to follow up.

Inviting guests

Private categories (Dignitary, VIP, Speaker and others) need an invitation. There are three ways a guest gets one.

1 You send it OVERVIEW → INVITATIONS

- 1 Select **New invitation**, name the collection and choose its category.
- 2 Pick the channel (email, SMS or WhatsApp) and the template. An email template must include `{{ invitation_link }}`.
- 3 Choose the usage: **Single** gives one link per person. **Multiple** gives one shared link with a set number of uses.
- 4 Add guests manually or by Excel upload. You can also turn on **Prefill data** and **Lock data**.
- 5 Save, then select **Send invitation**, or **Send in bulk** for the whole collection.

2 They request it OVERVIEW → INVITATION REQUESTS

Requests from the website and from partner sites wait in a queue.

- **Accept** invites the person to the target category, or adds them to it directly.
- **Reject** sends the rejection email if one is set. Otherwise the person is told nothing.
- **Move to category...** redirects one request.
- Each request category's form, target, emails and OTP are set under **Request categories**.

PARTNER API KEYS

Each partner site gets its own key under **Operations → API keys**. A key is shown **only once**, so copy it straight away. If it's lost, issue a new one.

3 A dignitary names them OVERVIEW → DIGNITARY PARTIES

Delegation, Security and Protocol are separate categories, and a dignitary can add up to 30 people. No one on the team creates or forwards links. The screen lists each dignitary's people, who has registered, and each email's state. Use **Send / Resend**, **Invite someone** for anyone left out, and **Invitation email** to choose the template. In Guests, a party member's row shows *Invited by* and the dignitary's name.

DO THIS FIRST

Choose the **Invitation email** on Dignitary Parties. Until you do, party invitations are created but **not** emailed.

Setting up and running the event

Categories MANAGEMENT → CATEGORIES

Every guest belongs to a category. It decides the form, who may register, the guest's status and which messages go out.

General settings *	Names, slug and visibility. Private needs an invitation. Public is an open link. Also sets the status given on register, accept and reject.
Form configuration *	The form shape and its mandatory fields.
Communications	The email, SMS and WhatsApp templates sent on register, accept, reject and decline.
Success page · Extras	The page shown after submitting, plus e-badge, QR code, OTP, extra guests and onboarding.
Admin access	Adds this category to scoped admins' access in one step.

* required · **Clone** a similar category to start faster. · **Block** takes a category out of use, and **Activate** brings it back.

Messages

CHANNEL	SET UP IN	CHECK IT WENT OUT IN
Email	Emails → Config · Templates · SMTP configurations	Logs → Guest Emails · Invitation Emails
SMS	SMS → Templates · SMS provider configs	Logs → Guest SMS · Invitation SMS
WhatsApp	WhatsApp → templates · config · provider configs	WhatsApp → Guest WhatsApp · Invitation WhatsApp

- A message goes out only when its channel is configured **and** a template is assigned in the category's Communications tab.
- **Automation** messages or updates many guests at once. For large sends, choose **Run manually after review**. **Newsletter** has its own lists and campaigns.

On site and logistics

Badges	Designs assigned per category (background, photo, font sizes). Bulk Update Badge changes the design for many categories at once.
Gates scans	Areas are venue zones, with the admins who work there. Gates are the entrances in each area. Scans is the log, with unique visitor counts.
Gate scanning	Setup gate once, then scan with Camera or Device scanner . "Guest not found": search by name or capture the badge.
Travel	Hotels and rooms, and each guest's Logistics tab (flights, hotel, pickup). E-Visa generates packages and sends issued visas.

Admins and troubleshooting

Adding an admin MANAGEMENT → ADMINS

- 1

Select **New admin** and enter their name, email and phone.
- 2

Choose a **role**, which decides what they can do. Roles are shared, so create a new role rather than widening an existing one.
- 3

Select **Send setup email** (recommended), and keep **Require OTP on login** on.
- 4

Set the **data scope**: categories, statuses, and an area or gate for on-site staff.
- 5

Ask them to sign in and check that their guest list is what you expect.

AN EMPTY SCOPE SHOWS NO GUESTS

A non-Super admin with no categories and no statuses sees **no guests**. The hint on the admin form currently says the opposite. Categories and statuses combine: *Sponsor + Accepted* shows accepted sponsors only.

The full permission matrix is in the separate [Administrator Access & Roles](#) guide.

When something doesn't work

PROBLEM	WHAT TO DO
Guest list is empty	Add categories and statuses to the admin's data scope
A menu item is missing	Add that feature to their role
A guest got no email	Check Logs, then the category's Communications tab
Button says "provider not configured"	Set up that channel under Communications
A dignitary's party got no invitations	Choose the Invitation email on Dignitary Parties, then Send
Invitation link is "not valid"	The link was already used, or its collection is inactive. Send a new invitation.
No Accept button	The guest isn't Pending or On-hold. Use Hold first to reopen them.
No Print, Collect or Export	Switch it on in the category's Extra actions, or add it to the role
Scoped admins can't see a new category	Use the category's Admin access tab
