PROSPECTS · CRM

CRM Plan

A new Prospects section in the TOURISE 2027 admin: the people we may invite, where each one is in the system, and inviting them. Revised for the client's template v4.1. Plan only, nothing built yet. 19 October 2026.

1. In short

The team keeps lists of people it may want at the event in Excel, and the sheet cannot tell whether a person has asked for an invitation, been invited, or registered. The **Prospects** section imports the client's CRM sheet (`TOURISE_CRM_Fields_and_Import_Template_v4.1.xlsx`) and adds what Excel cannot:

- **Tracking**, the heart of it: for every person, where they are in the system (in CRM, requested, invited, sent, opened, registered, confirmed), with dates and a link to each record (part 3).
- **Sub-categories** across the whole system: defined in Category settings, chosen with the category, carried as a tag on guests, invitations and the CRM (part 4).
- **Owners who are admins**, notified of their reminders and of their people's progress, with Prospects set up in **Roles** and limited by category (part 5).
- The template's **Invitation Channel, Security Clearance and Invitation Status**, with their rules enforced (part 6).
- Tabs per category, search and filters, **Invite to a collection**, a report by owner, export, and who did what on every action.

> **Decisions needed:** nine points, listed with a space for the answer in the last part, **Questions**. Four of them need the client. Everything else is decided.

PART A · FOR THE BUSINESS

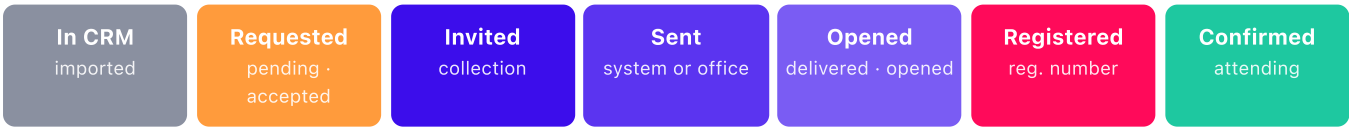

2. What v4.1 changes

In the template	In the plan
Tier is 1 to 3 (Tier 4 removed)	Three values, admin-only, behind its own role box.
Category and Sub-category required, Sub-category under Category	Sub-categories become a system-wide feature (part 4).
Relationship Owner required; reassignments logged	An admin account; every change logged with old owner, new owner, who and when (part 5).

In the template	In the plan
Invitation Channel: H.E.'s Office, MOFA, Royal Court, Other Ministries, Relationship Owner, CRM	Only *CRM* sends from the system; the others are recorded (part 6).
Security Clearance: Not Required, Not Submitted, Pending, Approved, Not Approved	Gates sending, as the template's rules say (part 6).
Invitation Status replaces Outreach Status: Not Sent, In Progress, Sent, Pending, Accepted, Declined	Follows the system where the system knows; the rest is the team's.
Sent Date and Sent By required once sent	So the CRM never sends twice.
Follow-up: owner, last contact, next reminder	Reminders notify the owner; overdue reads orange.
Possible duplicates on email, mobile, then name	Email or mobile refused; same name flagged (question 6).
No passport, ID, date of birth or photos (PDPL)	A file carrying such a column is refused.
A grey **example row**	Skipped on import.

3. Tracking: where each person is in the system

The first question the section answers. Each person has a journey, **read live** from the request, invitation and guest records it links to, never typed by hand:

Step	Reached when	Shown with
In CRM	Imported or added	Date, by whom, the import file
Requested	A request has the email	Pending, accepted or rejected; the form; date
Invited	An invitation exists, from the CRM or from a request	Collection, channel, who invited, date, the invitation link
Sent	The system sent it, or a manual send was recorded	Date, and by the system or by whom (H.E.'s Office, MOFA …)

Step	Reached when	Shown with
Delivered · Opened	The email or message provider reports it	Date
Registered	A guest registered with the invitation, or with the email	Registration number, category, sub-category, date, and the email used if it differs
Confirmed	The guest is confirmed and attending	Guest status
Declined · Rejected	The guest declined, or the request was rejected	Date, who

- **On the list:** a *Tracking* column with the furthest step and its date, and the steps as dots, so a glance shows how far each person got. Filters such as *invited, not opened after 7 days* or *sent, not registered*.
- **On the person's page:** the journey as a timeline at the top, each step opening its request, invitation or guest; then the team's activities and the history.
- **Tiles** count the open tab as a funnel: in CRM → invited → sent → opened → registered → confirmed.
- **Tracked by link, not only by email:** a person invited as *a@x.com* who registers as *a.b@y.com* still reads Registered.
- **Each move notifies the owner** (part 5).

4. Sub-categories, across the system

- **Defined in Category settings:** each category gets a list of sub-categories (English and Arabic name, order, active). One in use is switched off, never deleted: records keep it, it is no longer offered. Seeded from the client's *Badge Categories* sheet (about 40, e.g. Dignitary: Head of State International, Ministers & Excellencies International, Ambassadors).
- **Chosen with the category, wherever a category is chosen:**

Where	How
Guests: Add, See more / profile, Change category	A second select beside the category, offering that category's sub-categories
Invitations: new collection	The collection's default sub-category
Invitations: Add people, the guest card, import	Per person, starting from the collection's default
CRM: import, the person's page, bulk edit	A column, a field, a bulk action
Registration	Not asked of the guest: a guest registering through an invitation takes the invitation's sub-category

- **A tag:** a chip beside the category, a column and a filter on the guest list, the invitations and the CRM, in every export and in the history. A bulk action sets it for ticked guests.

- **Changing the category** clears the sub-category and asks for the new one in the same step.

5. Owners, roles and notifications

- **The Relationship Owner and the Follow-up Owner are admin accounts** with the Prospects permission for the person's category. The picker offers only those admins. A blank Follow-up Owner means the Relationship Owner.
- **Set up in Roles**, with the other modules: View, Create, Update, Delete, Invite, Export, Settings, Record History, Audit Trail, **View tier** and **Can own prospects**.
- **Per category:** the role's category limits apply everywhere. An admin limited to Speakers sees, imports, owns, invites, reports on and exports Speakers only. Moving a person to a category their owner cannot see asks for a new owner.

Notification	Goes to
Made owner of a person (or of many, as one count)	The new owner
Next Reminder Date is today; it has passed (once a day while overdue)	The follow-up owner, else the relationship owner
Tracking moves: sent, opened, registered, confirmed, declined	The same
One of your people files a request	The same
Imports, edits, deletes	Admins who follow Prospects in their notification settings

In the admin bell, and by email for those who turn it on.

6. Channel, clearance and status

Rule	What the system does
Only the CRM channel sends	For H.E.'s Office, MOFA, Royal Court, Other Ministries and Relationship Owner, the invitation goes out elsewhere and is **recorded** (status, date, sent by). Once recorded, the CRM never sends its own.
H.E.'s Office	Needs clearance *Approved* before *Sent*; *Not Required* is refused for it.
Not Submitted · Pending	Nothing can be sent.
Not Approved	Blocked, with "escalate to Fahad".
Invitation Status	*Sent* is set when the CRM sends, or with the recorded date and sender; *Accepted* and *Declined* as question 2 decides; *In Progress* and *Pending* stay the team's.

Checked on the server, in bulk too: a bulk invite of 200 with 30 blocked invites 170 and lists the 30 with the reason for each.

7. Decisions with options

7.1 Accepted and registration BUSINESS

The template says *Accepted opens registration through the CRM*: the guest accepts, then gets the registration email. Today our invitation email *is* the registration link.

Option	What happens	Trade-off
A. Accepted = registered RECOMMENDED	The invitation stays the registration link; the status reads Accepted once they register, Declined when they say no.	No new step for the guest; the client's two steps become one.
B. Two steps	The invitation asks accept or decline first; Accepted sends a second email with the link.	Follows the wording; a new page and email, and every guest clicks twice.
C. Manual	Accepted is set by hand (by phone, through an office); setting it sends the registration invitation.	Fits invitations sent outside the system.

A and C can live together: CRM-channel invitations follow A, manual channels follow C.

7.2 Sub-category and templates BUSINESS

The client's Field List says the sub-category "sets the exact template (e.g. Ministers & Excellencies Local)".

Option	What happens	Trade-off
A. A tag now RECOMMENDED	Shown, filtered, exported, carried to the guest. The category still picks the form and emails.	What was asked; small. Per-sub-category templates wait.
B. Template per sub-category	A sub-category may have its own invitation, registration and confirmation templates; empty uses the category's.	Follows the Field List; more to build and to set up.

7.3 Is a sub-category required? BUSINESS

The CRM requires one. **Recommended:** required wherever the chosen category has sub-categories defined, optional where it has none.

7.4 Duplicates BUSINESS

Option	What happens	Trade-off
A. Refuse and flag RECOMMENDED	Same email or mobile: refused, naming the existing CRM ID. Same name, other email: imported and flagged *Possible duplicate* for an admin to check.	Nothing merged by mistake; two records until one is deleted.
B. A merge tool	A flagged pair is merged into one record with both histories.	What the template asks; a merge across activities, invitations and history to get right.

7.5 After registration: one record or two BUSINESS

Option	What happens	Trade-off
A. Two copies	The CRM keeps its copy of the shared fields; the guest has its own.	Nothing to build, but they drift.
B. Linked, the guest wins RECOMMENDED	The CRM entry stays, linked; the shared fields are shown from the guest. The CRM keeps tier, owner, channel, clearance, status, source, activities.	One truth per field; the owner report still counts registered people.
C. Move to Guests	The CRM entry is deleted on registration.	The CRM-only fields need new guest fields or are lost.

7.6 Prefilled registration CLIENT

Should someone invited from the CRM find the registration form already holding what the CRM knows? **A.** What invitations hold today (prefix, names, email, mobile, company, job title) · **B.** Every shared field, still editable RECOMMENDED IF YES · **C.** Nothing.

7.7 Needed from the client CLIENT

The dropdown values. Every dropdown in v4.1 reads `#REF!` again: the sheets holding the lists were deleted. The Field List and Status Definitions give most values; still missing: **Source List**, **Activity Type**, **Outcome** and the **industry hierarchy** with EG's proposals. The admin's *Download template* will build the same columns with working dropdowns.

The template disagrees with itself. The Field List has Follow-up Owner and Last Contact Date, the Contacts sheet does not; the Contacts sheet has *Follow-up sent* and *Previous category*, the Field List does not; the Read Me counts 36 fields.

Sub-event Invitations is listed as a system field. What are sub-events? Left out of the first build until known.

7.8 Already decided

#	Decision
1	A section of its own, not part of Nominations.
2	Matched to the system by email (lower-cased), and by the invitation the CRM sent.
3	Two statuses side by side: tracking (the system's) and the team's Invitation Status.
4	The columns are the client's v4.1 *Contacts* sheet; its *Activity Log* imports too; *Tier Sign-off* stays the client's approval step, its reference recorded on the import.
5	A tab per category; inviting picks the collection, from any tab.
6	Importing never sends. A mobile-only person can be invited by SMS or WhatsApp.
7	Every action records the admin who did it.
8	The shared fields use the guest table's own names and values, now including the sub-category.
9	Sub-categories system-wide, defined in Category settings, a tag (part 4).
10	Owners are admin accounts; Prospects in Roles, limited by category; owners notified (part 5).
11	Tracking is the heart of the section (part 3).
12	Channel and clearance rules enforced on the server (part 6).

8. The columns

The 37 columns of the v4.1 *Contacts* sheet. **Same as registration** means the guest record already holds the field with the same values.

Group	Columns	Same as registration
Identity	CRM ID (blank = new, filled = update) · Prefix · First and Last Name · Arabic Name · Job Title · Company · Company Location · Email · Mobile · Gender · Nationality · Country of Residence · Region (from the country)	All but CRM ID and Company Location
Classification	Sector · Industry · Sub-industry · Seniority Level · Category · Sub-category · Tier (1–3)	All but Tier
Relationship & Source	Source List · List Provided By · Relationship Owner	CRM only
Invitation	Invitation Channel · Security Clearance · Invitation Status · Sent Date · Sent By	CRM only
Follow-up	Follow-up Owner · Last Contact Date · Next Reminder Date	CRM only

Group	Columns	Same as registration
History	History / Source · Received By · Previous Engagement · Previous Category · Notes	CRM only
System (never imported)	Tracking / Registration Status · Registration Link Sent · Tier Sign-off Reference · Owner History · Possible Duplicate · Last Updated / By	Read from the system

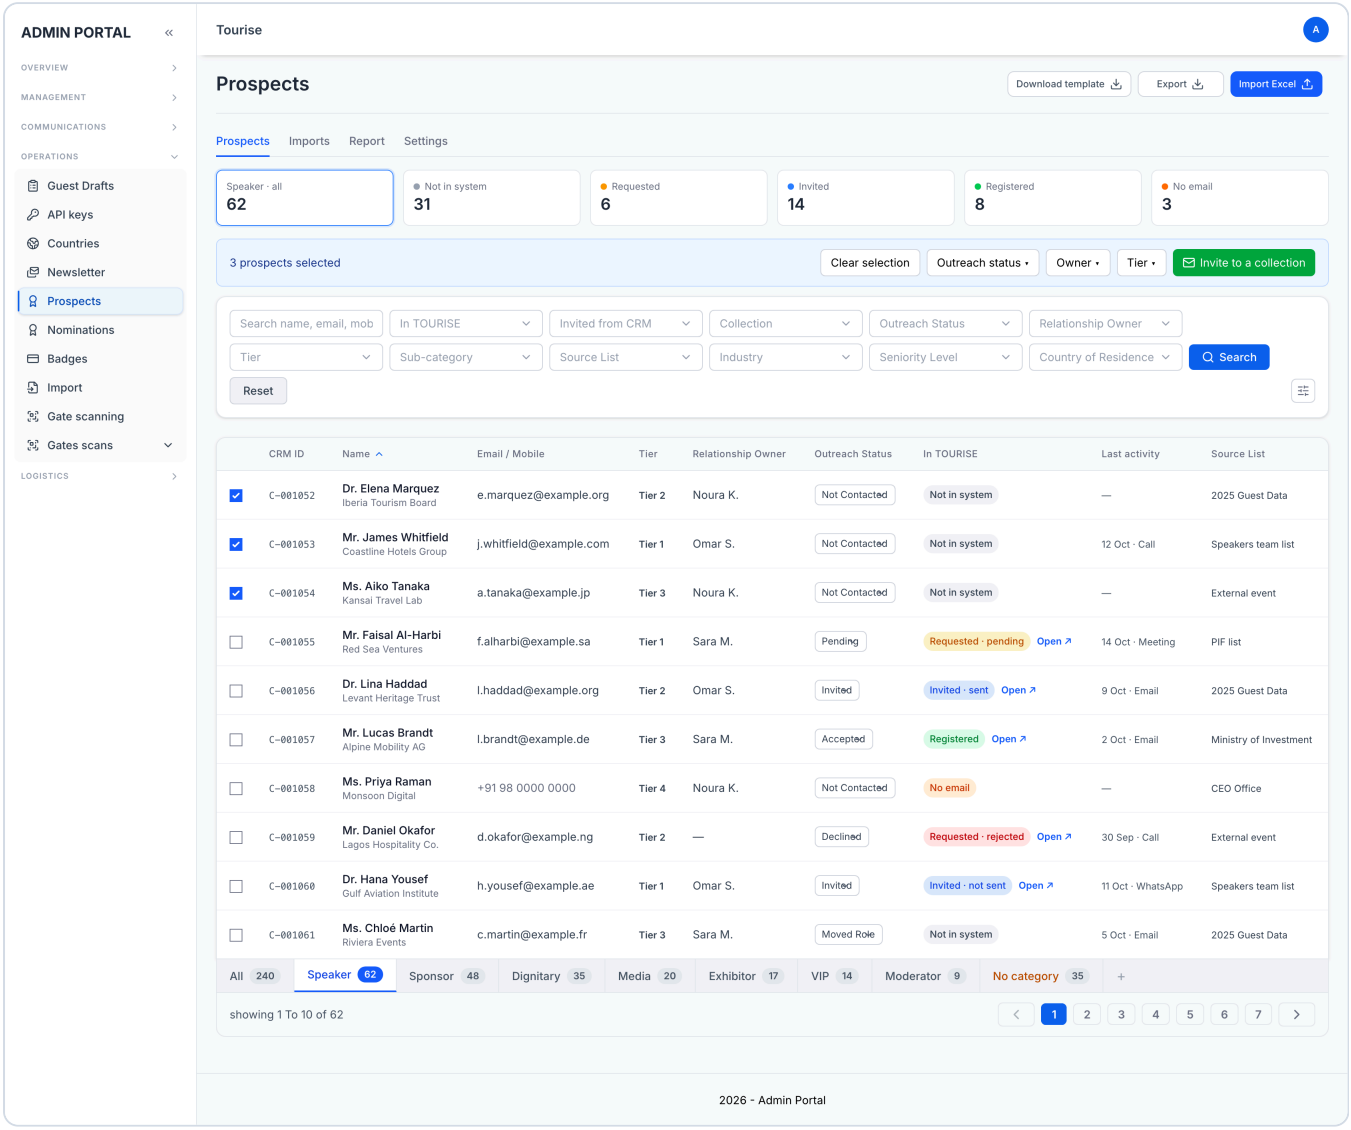

9. Search and filters

One search box over name (English and Arabic), email, mobile, company, job title and CRM ID. Filters combine, stay in the page address, and apply to the export.

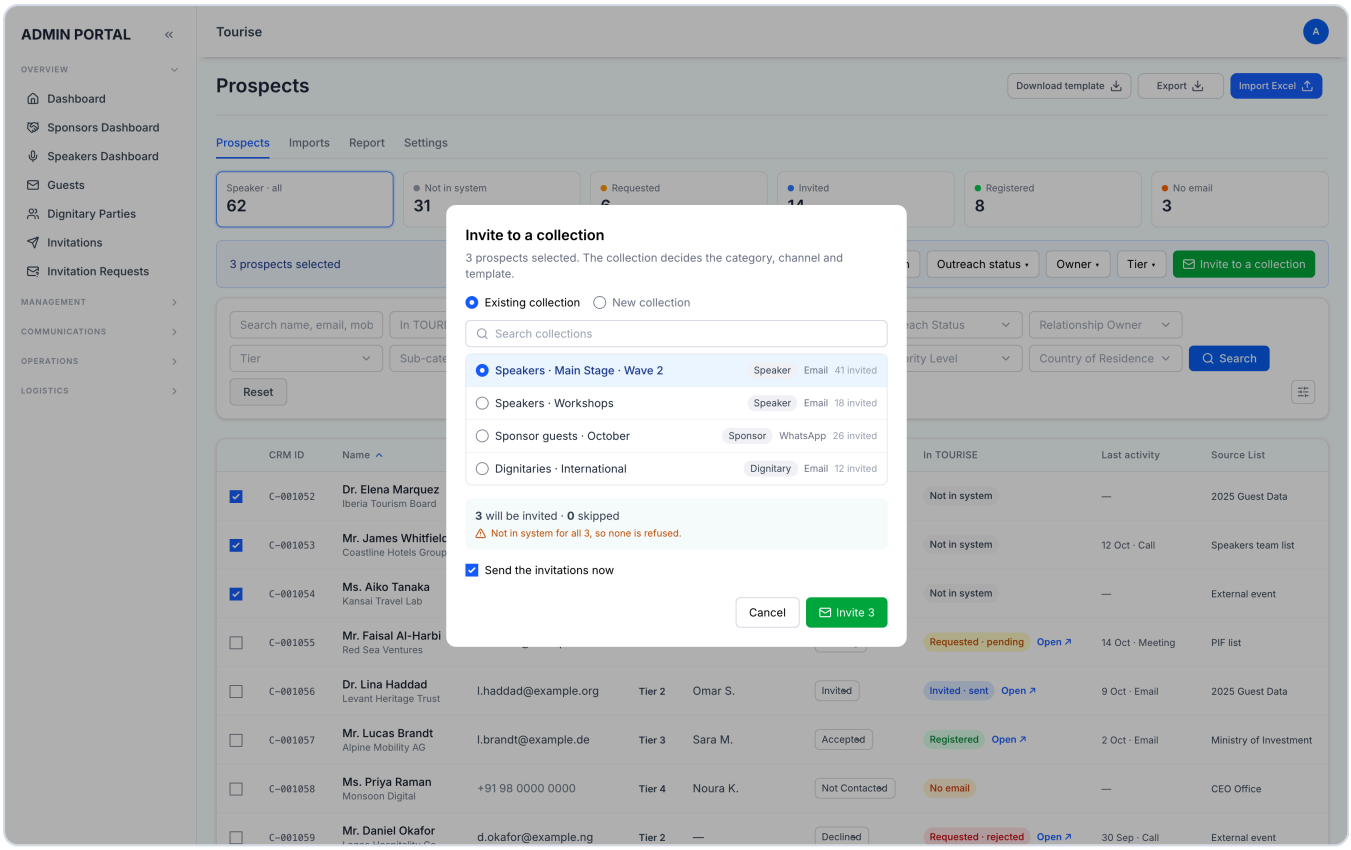

Group	Filters
Tracking	Each step · not opened after N days · sent, not registered · Invited from CRM · Collection
The team's follow-up	Invitation Status · Channel · Security Clearance · Relationship Owner · Follow-up Owner · Tier · Reminder overdue or this week · Last contact · No activity yet
Who they are	Category (also the tabs) · Sub-category · Sector · Industry · Sub-industry · Seniority · Gender
Where they are	Nationality · Country of Residence · Region · Company Location
Where they came from	Source List · List Provided By · History / Source · Import file · Date added · Possible duplicate

10. How it will look

Drawn inside the real TOURISE admin with sample people, before v4.1: the *Outreach Status* column shown here becomes *Invitation Status*, and the *In TOURISE* column becomes *Tracking* with its steps. The details may move during the build.

The list. Tiles count the open tab (each is a filter); search and filters; people ticked, with *Invite to a collection*; the status changed in the cell; the system status with *Open ↗*; the category tabs at the bottom, like sheets in Excel.

Invite to a collection. The admin picks a collection (or makes one, now with a sub-category); it decides the category, channel and template. The dialog says how many will be invited and skipped, and why.

PART B · FOR DEVELOPERS

11. Approach

- **Tracking is computed, never stored:** through the link first (`prospects.invitation_id` → invitation → `guests.code_id`), then by lower-cased email over guests, invitations and requests; furthest step wins; filtered in SQL with `EXISTS` . A stored copy would need updating from four modules.
- **Sub-categories:** `sub_categories` (`category_id` , `name_en` , `name_ar` , `sort_order` , `is_active`) and a nullable `sub_category_id` on `guests` , `invitations` , `invitation_collections` , `prospects` ; the server checks it belongs to the record's category. The guest's three save paths (public store, admin create, admin update) each take it, tested through HTTP.
- **Inviting goes through Invitations:** the body of `addGuests()` moves into a service both call; invitations made here carry `created_via = 'prospect'` .
- **Owners:** `relationship_owner_id` and `follow_up_owner_id` are admin ids; reassignments are activity entries. A daily scheduled job raises due and overdue reminders; tracking moves notify through `AdminActivityFeed` .
- **Roles:** a `prospects` feature in `AdminPermissions` , with the role's category limits applied to every query.
- **The template is generated by the system** with working dropdowns (dependent Category → Sub-category, Industry → Sub-industry); columns read by heading, so the client's file still parses.

12. Build order

#	Step	Contains
0	**Sub-categories**	Table and Category settings; the field on guests, invitations, collections; the select on every form and import; inherited at registration; column, filter, bulk set, export
1	**Import and records**	Tables, settings lists, template, import with CRM ID update, tabs, record, edit, bulk edit, Roles with category limits, audit
2	**Tracking**	The journey lookup, column with steps, filters, funnel tiles, timeline, links; the `invitations.email` index
3	**Inviting**	Shared minting service, channel and clearance rules, recording manual invitations, bulk results with reasons
4	**Follow-up and report**	Activities, owners' reminders and the daily check, owner notifications, Activity Log sheet, report by owner
5	**Export**	A tab or the filtered table, every column and the tracking step

Each step merges on its own. Step 1 waits on the client's lists (7.7) only for the columns that use them.

13. Out of scope

- Matching by mobile or name for tracking (name only flags a possible duplicate); merging, unless 7.4 B.
- The Tier Sign-off approval inside the system; sub-event invitations; emailing prospects without inviting them (that is Nominations).
- Any public route except registration taking the invitation's sub-category; the mobile app.

14. Questions

Everything waiting on an answer. The recommended answer is what will be built if nobody says otherwise.

#	Question	For	Options	Recommended	Answer
1	The values of **Source List, Activity Type, Outcome** and the **industry hierarchy** (7.7)	CLIENT	Send the lists; kept by admins in Settings	Admin-kept lists	
2	Does **Accepted** come before registration? (7.1)	BUSINESS	A. Accepted = registered · B. Two steps · C. Manual	A, with C for manual channels	
3	Does a **sub-category choose the templates**? (7.2)	BUSINESS	A. A tag now · B. Template per sub-category	A	
4	Is a **sub-category required** outside the CRM? (7.3)	BUSINESS	Required when the category has some · Always · Never	When the category has some	
5	After a person **registers**, where does their data live? (7.5)	BUSINESS	A. Two copies · B. Linked, the guest wins · C. Move to Guests	B	
6	**Duplicates**: flag only, or merge? (7.4)	BUSINESS	A. Refuse and flag · B. A merge tool	A	
7	Should the **registration form be prefilled**? (7.6)	CLIENT	A. Today's fields · B. Every shared field · C. Nothing	B, if yes	
8	Which is right where the **Contacts sheet and the Field List disagree**? (7.7)	CLIENT	Follow-up Owner, Last Contact Date, Follow-up sent, Previous category	Keep all four	
9	What are **sub-event invitations**? (7.7)	CLIENT	Explain, or drop the field	Left out for now	

Full detail (every column, import rule and test case): `tourise-docs/tasks/054-prospects/TASK.md`.
